AquaSensor AS 3000

Description

The AquaSensor AS 3000 is the further development of the proven AS 1000 series for the online detection of water in oils, particularly as a sensor for condition monitoring. It records the water saturation and the temperature of the operating fluid.

The display allows you to view the current measured values or to adjust the parameter settings.

The measured values are output as a 4 ... 20 mA or 0 ... 10 V signal and are the basis for two parameterisable switching outputs.

The AS 3000 thus enables hydraulic and lubricating oils to be monitored accurately, continuously and online.

Applications

- Mobile hydraulics
- Hydraulic and lubrication systems in industry

Advantages

- 4 digit digital display, can be aligned in two axes
- User-friendly due to key programming
- Individual configuration
- Reliable on account of its compact, rugged design
- Economical sensor
- No calibration required for different oil types
- Pressure-resistant, even with pulsations
- Early detection of water problems thus preventing faults and unnecessary interruption to operations
