	Max.		3000					2800	2500	2300	2100	1750	
Approx. weight		[kg]	7.83	8.0	8.16	8.34	8.78	8.99	9.25	9.47	9.60	9.85	10.10

The continuous and maximum pressures given here only apply to pumps with flange ports. If threaded ports are required, the performance will be reduced. To find out whether a pump with threaded ports can be used in a high pressure application, please contact HYDAC.

6.5.3 Hydraulic fluids

The pump series is designed for use with

HL Hydraulic oil
(normal mineral oil)
and

HLP Hydraulic oils of the R&O type
(Rust and Oxidation inhibitor)

6.5.4 Viscosity range

Normal operating viscosity:
16 - 200 cSt (mm²/s)

For other viscosity ranges, please
contact HYDAC.

6.5.5 Temperature range

Ambient temperature range
-22 to 55 °C

Fluid temperature range
NBR

-25 to 85 °C

Viton

-15 to 90 °C

6.5.6 Seals

The pump series is equipped with NBR seals.

If special hydraulic fluids are used, the seal material must be changed if required. Please contact HYDAC.

6.5.7 Filtration

For maximum service life of the pump and system components, the system should be protected from contamination by effective filtration.

Cleanliness class:

21/ 18/ 15 to ISO 4406:1999

or

Class 9 to NAS 1638 or cleaner.

At system pressures above 160 bar cleanliness class:

19/17/14 to ISO 4406:1999

or

Class 8 to NAS 1638 is required.

6.5.8 General notes

Gear pumps can be combined to form double or triple units (for larger units please contact HYDAC). Generally, the specifications for single pumps apply, but the following must be observed:

- Only pumps of the same size or in decreasing order of size can be combined.
- It is recommended that the pump with the largest displacement is used as the front pump.
- The maximum speed of the multiple unit is limited to that of the individual stage with the lowest speed.
- The maximum pressure of the pump unit or the individual stages is determined by the maximum drive and through drive torques (see point 6.5.9).

6.5.9 Max. drive and through drive torques

Size	Drive shaft	Max. drive torque	Max. through drive torque		
			Secondary pump Size 1	Secondary pump Size 2	Secondary pump Size 3
1	Tapered 1 : 5	30 Nm	30 Nm		
	Tapered 1 : 8	30 Nm			
2	Tapered 1 : 5	193 Nm	30 Nm	65 Nm	
	Tapered 1 : 8	198 Nm			
	Splined SAE A	86 Nm			
3	Tapered 1 : 5	301 Nm	30 Nm	65 Nm	228 Nm
	Tapered 1 : 8	218 Nm			
	Splined SAE B	272 Nm			

The resulting torque can be calculated by the following formula:

$$M_{\max} = \frac{\Delta p_1 \cdot V_1}{20 \cdot \pi \cdot \eta_{mh}} + \frac{\Delta p_2 \cdot V_2}{20 \cdot \pi \cdot \eta_{mh}} + \frac{\Delta p_3 \cdot V_3}{20 \cdot \pi \cdot \eta_{mh}}$$

Efficiency $\eta_{mh} \approx 0.8 - 0.9$

6.5.10 Pressure restrictions for through drive pumps

There is a pressure restriction at maximum pressure for the secondary and any further pumps due to the maximum permitted through drive torque.

Size	Displacement [cm³/rev]	Peak pressure [bar]
2	16	220
	19	190
	22	160
	25	130

6.5.11 Installation notes

The pump can be installed horizontally or vertically with the shaft at the top. If the pump is installed on the tank or above the oil level, the distance between the pump inlet and the oil level should not exceed 1 metre.

When installing a HYDAC pump always ensure that the fluid remains in the pump during stoppages.

B. Suction line

If the pump is installed above the oil level, particular attention must be paid to the suction pressure. The minimum cross-section of the suction pipe must be equal to or larger than the cross-section of the pump port. The suction pressure must be kept within the values specified.

Minimum suction pressure:
0.8 bar abs.

Maximum suction pressure:
2.2 bar abs.

C. Drive

Use a flexible coupling whenever possible. There must not be any radial or axial forces on the pump shaft. The maximum permitted misalignment is 0.2 mm and the angular deviation must be less than 0.2°. Where there may be excessive bending moments or vibrations, the pump unit must be supported by suitable means.

Technical drawing of a mechanical part showing three views: a side view (top), a front view (bottom left), and a back view (bottom right). The side view shows a long rectangular component with a central flange and a mounting bracket on the right. Dimensions include overall length 101, width 74, and various mounting hole patterns (4x2, 4x1). The front view shows a square base with rounded corners, 66x66, with four mounting holes. The back view shows a square base with rounded corners, 90x90, with four mounting holes and a central circular feature. A coordinate system 'Y' is indicated on the left.
