Suction Filter SF/SFM/SFF and Suction Filter Elements S/S.. up to 500 l/min

1. TECHNICAL **SPECIFICATIONS**

1.1 FILTER HOUSING Construction

The filter housings are designed in accordance with international regulations. The SF filters consist of a filter housing and a bolt-on cover plate. The SFM and SFF filters consist of a filter head with filter bowl and bolt-on cover plate (on the SFF there is a foot valve in the base of the filter bowl). Standard equipment:

- bypass valve
- connection for a clogging indicator

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889 The suction filter elements S are designed to be screwed into the suction lines of pumps. It is essential that suction filter elements are always installed well below the minimum oil level. The suction filter elements S.. are designed to be mounted simply onto the outside of the tank. They are used in devices with hoses that are exposed to little mechanical load. Elements can be changed very simply. Standard equipment:
- without bypass valve

Filter elements are available with the following pressure stability values:

4. FILTER CALCULATION / SIZING SF, SFM, SFF

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\begin{array}{l} \Delta p_{total} = \Delta p_{housing} + \Delta p_{element} \\ \Delta p_{housing} = (see\ Point\ 4.1) \\ \Delta p_{element} = Q \cdot \frac{SK^*}{1000} \cdot \frac{viscosity}{30} \\ (*see\ Point\ 4.2) \end{array}$$

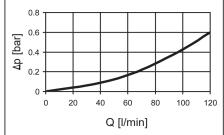

For ease of calculation, our Filter Sizing Program is available on request free of charge.

4.1 Δp-Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

4.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS (FOR SF/SFM/SFF FILTERS)

The gradient coefficients in mbar/ (I/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

5. DIMENSIONS

Tank requirements

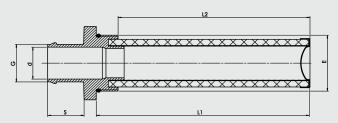

- In the filter contact area, the tank flange should have a maximum flatness of 0.3 mm and RA 3.2 μm maximum roughness.
- In addition, the contact area should be free of damage and scratches.
- The fixing holes of the tank flange must be blind, or stud bolts with threadlocker must be used to fix the filter. As an alternative, the tank flange can be continuously welded from the inside.
- Both the tank sheet metal and/or the filter mounting flange must be sufficiently robust so that neither deform when the seal is compressed during tightening.
