

## Inline filter with filter element according to DIN 24550

Type 350LEN0040 to 1000; 350LE0130, 0150

**RE 51422**  
 Edition: 2021-04  
 Replaces: -

350LEN\_d

- ▶ Size as per **DIN 24550**: 0040 to 1000
- ▶ Other sizes: 0130, 0150
- ▶ Nominal pressure: 350 bar [5,079 psi]
- ▶ Connection sizes up to G2; SAE 2"; SAE 24
- ▶ Operating temperature: -10 °C to 100 °C [14 °F to 212 °F]

### Features

Inline filters are used in hydraulic systems for separating solid materials from fluids and lubricating oils.

- They come with the following features:
- ▶ Filter for inline installation
  - ▶ Special, highly efficient filter materials
  - ▶ Filtration of very fine particles and high dirt holding capacity across a broad pressure differential range
  - ▶ High collapse rating of the filter elements
  - ▶ Equipped standard with mechanical optical maintenance indicator with memory function
  - ▶ Various, optional electronic switching elements, modular design
  - ▶ Optional bypass valve integrated in the filter housing
  - ▶ High filtration performance due to tangential, cyclonic flow path
  - ▶ Additional configurations available for special fluids

## Filter design

Easy selection of the filter size is made possible by the FilterSelect online tool. The filter can be designed using the operating pressure, flow and fluid system parameters. The required filter rating is based on the application, the sensitivity to contamination of the components and the environmental conditions.

The program leads you through the menu on a step-by-step basis.

A documentation of the filter selection can finally be created in the form of a PDF file. This file contains the entered parameters, the designed filter with material number including spare parts, and the pressure loss curves.

## Function, cross-section

The 350LE(N) inline filter is designed for direct installation into pressure lines.

It consists primarily of a filter head (1), a threaded filter bowl (2), a filter element (3) and a mechanical optical maintenance indicator (4). For filters with low collapse filter elements (= pressure differential code letter A), a bypass valve (5) comes standard.

The fluid passes through the inlet to the filter element, where it is cleaned. Any dirt particles filtered out collect in the filter element. The filtered fluid then enters the hydraulic circuit through the outlet.

The filter housing and all connection elements are designed so that pressure spikes – as they may occur, e.g., due to an accelerated fluid quantity from large control valves opening abruptly – can be safely absorbed. Sizes 0160 and larger come with a drain screw (6) standard. Size 1000 comes with a two-part filter bowl, with the filter bowl fixed to prevent the bowl from spinning in the filter head.

An electronic switching element (7) can be added to the mechanical optical maintenance indicator in order to integrate it into an electric circuit. The electronic switching element must be attached to the mechanical visual maintenance indicator and held with the locking ring supplied. The electronic switching elements are connected with a mating connector or cable connection. The electronic switching element must be ordered separately.

### WARNING

- If the maintenance indicator is ignored when an element change is required, there is the possibility the filter will go into bypass and contaminated oil will pass to the clean side of the filter outlet. Therefore the filtration effectiveness is no longer guaranteed.

	▶ B	bar [psi]	330 [4,785]

For detailed information on Hengst filter elements, see data sheet 51420.

## Compatibility with permitted hydraulic fluids

Hydraulic fluid	Classification	Suitable sealing materials	Suitable adhesive	Standards	
Mineral oil	HLP	NBR	Standard	DIN 51524	
Biodegradable	▶ Water insoluble	HETG		NBR	VDMA 24568
		HEES		FKM	VDMA 24568
	▶ Water soluble	HEPG		FKM	VDMA 24317
Flame-resistant	▶ Waterless	HFDU, HFDR		FKM	DIN 24320
		HFAS		NBR	VDMA 24317
	▶ Aqueous	HFAE		NBR	
		HFC		NBR	
	▶ Skydrol	–	EPDM	Special "H"	

### Important information on hydraulic fluids:

- ▶ For more information and data on the use of other hydraulic fluids, see data sheet 90220 or contact us.
- ▶ **Flame-resistant, aqueous:** Due to possible chemical reactions with materials or machine and system component surface coating, the service life with these hydraulic fluids may be less than expected.

- Do not use filter materials made of filter paper P, use filter elements with glass fiber filter material instead.
- ▶ **Biodegradable:** If filter materials made of filter paper are used, the filter life may be shorter than expected due to material incompatibility and swelling.

## Assembly, commissioning, maintenance

### Assembly

- ▶ The max. operating pressure of the system cannot exceed the max. admissible operating pressure of the filter (see name plate).
- ▶ When assembling the filter (see also “Tightening torques”), note the flow direction (arrows) and the required servicing height of the filter element (see “Dimensions”).
- ▶ Filter element exchange is made easiest when the filter bowl is oriented downward. Ensure the maintenance indicator is easily visible.
- ▶ Remove the plastic plugs in the filter inlet and outlet.
- ▶ Make sure power is disconnected during assembly.
- ▶ The optional electrical maintenance indicator is connected using the electronic switching element with 1 or 2 switching points, which is placed on the mechanical visual maintenance indicator and held in place by a locking ring.

### Commissioning

- ▶ Commission the system.

 **Important:**

The filter has no bleeding mechanism.

### Maintenance

- ▶ If the red indicator pin rises out of the mechanical visual maintenance indicator and/or the electronic switching element switches at operating temperature,

the filter element is dirty and has to be replaced/ cleaned. For more details, see data sheet 51420.

- ▶ The material number of the correct replacement filter element is on the name plate of the complete filter. Verify that it matches the material number on the filter element.
- ▶ Decommission the system.
- ▶ Release operating pressure on the system side.

 **Important:**

The filter has no bleeding mechanism.

- ▶ Drain the oil on the dirt side using the drain screw (size 0160 and larger).
- ▶ Unscrew the filter bowl (or base if size 1000).
- ▶ Slightly turn the filter element to remove it from the spigot.
- ▶ Clean the filter components as needed.
- ▶ Check the seals on the filter bowl for damage and replace them as needed.  
For compatible seal kits, see “Spare parts”.
- ▶ Wire mesh filter elements can be cleaned. For detailed cleaning instructions, see data sheet 51420.
- ▶ Slightly turn the new or cleaned filter element to install it on the spigot.
- ▶ Assembly is reverse of removal.
- ▶ Note the torque specifications (“Tightening torques”).
- ▶ Commission the system.

 **WARNING**

- |   |   |
|---|---|
| <ul style="list-style-type: none"> <li>▶ Only install or remove when system is not pressurized.</li> <li>▶ Filter is pressurized.</li> <li>▶ Only remove filter bowl when it is not pressurized.</li> <li>▶ Do not replace maintenance indicator when filter is pressurized.</li> </ul> | <ul style="list-style-type: none"> <li>▶ Failure to observe flow of direction during assembly will cause filter element to be damaged beyond repair. Particles will enter the system and damage downstream components.</li> </ul> |
|---|---|

 **Important:**

- ▶ Only trained specialists may work on the filter.
- ▶ The safety and functionality of the filter are only guaranteed with original Hengst spare parts.
- ▶ The warranty will be void if the delivery item is

modified or improperly mounted, installed, maintained, repaired or used by the ordering party or a third party, or exposed to environmental conditions exceeding our installation conditions.

## Directives and standardization

### Product validation

Hengst filters, the filter elements built into them and filter accessories are tested and quality-monitored according to different ISO test standards:

Pressure pulse test	ISO 10771:2015-08
Filtration performance test (multipass test)	ISO 16889:2008-06
$\Delta p$ (pressure loss) characteristic curves	ISO 3968:2001-12
Compatibility with hydraulic fluid	ISO 2943:1998-11
Collapse pressure test	ISO 2941:2009-04

The development, manufacture and assembly of Hengst industrial filters and Hengst filter elements is carried out within the framework of a certified quality management system in accordance with ISO 9001:2015.

### Classification according to the Pressure Equipment Directive

Inline filters for hydraulic applications as per 51422 are considered pressure holding equipment under Article 1 Section 2.1.4 Pressure Equipment Directive 97/23/EC (PED). However, under Article 1 Section 3.6 PED, hydraulic filters are exempt from the PED if they are not classified

higher than Category I (Guideline 1/19).

The fluids from "Compatibility with permitted hydraulic fluids" were considered for the classification.

They do not receive a CE mark.

### Use in explosive areas as per Directive 94/9/EC (ATEX)

Inline filters as per 51422 are not equipment or components in terms of Directive 94/9/EC and do not receive a CE mark. The ignition risk analysis showed that these inline filters do not have their own ignition sources as per DIN EN 13463-1:2009.

DIN EN 60079-14:2012 – be used in intrinsically safe electric circuits (Ex ib) in systems without requiring marking and certification.

Inline filters and the electronic maintenance indicators described here can be used in the following explosive areas:

According to DIN EN 60079-11:2012, electronic maintenance indicators with a switching point:

WE-1SP-M12x1 **R928028409**

WE-1SP-EN175301-803 **R928036318**

are considered simple electronic operating equipment that does not have its own voltage source. This simple electronic operating equipment may – according to

<sup>1)</sup> Temperature is based on the temperature of the medium in the filter and cannot exceed this value.

Possible circuit as per DIN EN 60079-14

### ⚠ WARNING

- ▶ Explosion hazard due to high temperature. Temperature is based on temperature of medium in hydraulic circuit and cannot exceed this value. Take steps to make sure max. admissible ignition temperature is not exceeded in explosive area.
- ▶ Make sure potential equalization is sufficient when using 51422 inline filters in explosive areas. Ground-

ing the filter with mounting screws is recommended. Note that paint and oxide protective coating are not electrically conductive.

- ▶ When replacing filter element, remove packaging material from explosive area around replacement element.

### 👉 Important:

- ▶ Safety and functionality of the filter are only guaranteed with original Hengst spare parts.

- ▶ Maintenance may only be performed by specialists on instruction of the owner in accordance with Directive 1999/92/EC Annex II Section 1.1.
