4/3 directional control valves, pilot operated, with electrical position feedback and integrated electronics (OBE)

RE 29083/08.13
Replaces: 09.12

1/22

Type 4WRTE

Size 10 to 35
Component series 4X
Maximum operating pressure 350 bar

Features

Page	Features
1	– Pilot operated 2-stage directional control valve with electrical position feedback of the main control spool and integrated electronics (OBE)
2	– Suitable for the position, velocity, pressure and force control
3	– Control of flow direction and size
4	– Pilot control valve:
5, 6	Direct operated, position-controlled, with pressure feed back of the pilot pressures
7	– Main stage:
8 ... 14	Self-centering, position-controlled
15 ... 21	– Subplate mounting:
21	Porting pattern according to ISO 4401

- 1) E, W6-, W8-, V only available with flow characteristics **L** (linear)
- 2) E1-, W8-, V1- only available with flow characteristics **L** (linear)
- 3) V1-125 only available with flow characteristics **L** (linear)
- 4) V1-150 only available with flow characteristics **L** (linear)
- 5) When replacing the component series 3X by component series 4X, the electronics interface is to be defined with **A5** (enable signal at pin C).

Detailed

- 1 Pilot control valve
- 2 Main valve
- 3 Integrated electronics (OBE)

Function, section

The 4/3 directional control valve is designed for subplate mounting, with position control and integrated electronics.

Set-up:

The valve consists of 3 main assemblies:

- Housing (1) with main stage control spool (2)
- Integrated electronics with inductive position transducer (3) of the main stage
- Pilot control valve (4) with control spool/socket unit (5), inductive position transducer (6) and pressure feed back for central position of the main stage control spool (2)

Function:

- With de-energized proportional solenoids (7; 8) central position of the main stage control spool (2) due to centering spring (9) and pressure feed back
- Control of the main stage control spool (2) via the pilot control valve (4)
 - the main stage control spool is positioned in a controlled manner
- Controlling the control spool of the pilot control valve (4) by changing the solenoid force of the proportional solenoids (7; 8)
- Connection of the command and actual values in the integrated electronics
- Pilot oil supply to the pilot control valve internally via port P or externally via port X
 - Pilot oil return internally via port T or externally via Y to the tank

- With a command value of 0 V, the electronics control the main stage control spool (2) in central position.

Failure of supply voltage:

- Integrated electronics de-energizes the solenoid in case of supply voltage failure or cable break
- Automatic pressure control on the same level in the control chambers (10 and 11) by the pilot control valve
- In case of pressure supply failure, centering of the main stage control spool by centering spring (9)
- Central position of the main stage control spool (2)

Attention:

Failure of the supply voltage will lead to an abrupt standstill of the control axis. The accelerations occurring in this connection may cause machine damage.

With control spool symbols E, E1-, W6- and W8-, the centering spring (9) brings the main stage control spool (2) into the central position, V and V1 control spools are switched into the preferred direction P to B and A to T in the tolerance range from 1% to a maximum of 11% of the control spool stroke.

Important notice!

The PG fitting (12) must not be opened. Mechanical adjustment of the adjustment nut located below is prohibited and damages the valve!

The zero point has been adjusted in the factory.

If the pilot control valve or the electronics is exchanged, the zero point has to be adjusted once again by instructed specialists.

Notice!

Changes in the zero point may result in damage to the system and may only be implemented by instructed specialists!

Technical data (for applications outside these parameters, please consult us!)

Sizes	Size	10	16	25	27	32	35
Weight	kg	8.7	11.2	16.8	17	31.5	34
Installation position and commissioning information		Preferably horizontal, see data sheet 07700					
Ambient temperature range	°C	-20 to +50					
Storage temperature range	°C	-20 to +80					
MTTF _d values according to EN ISO 13849	Years	150 ¹⁾ (for more information see data sheet 08012)					
Sine test according to DIN EN 60068-2-6:2008		10 cycles, 10...2000.. 10 Hz with logarithmic frequency changing speed of 1 octave/min, 5 to 57 Hz, amplitude 1.5 mm (p-p), 57 to 2000 Hz, amplitude 10 g, 3 axes					
Random test according to DIN EN 60068-2-64:2009		20...2000 Hz, amplitude 0.05 g ² /Hz (10 g _{RMS}) 3 axes, testing time 30 min per axis					
Shock test according to DIN EN 60068-2-27:2010		Half-sine 15 g / 11 ms, 3 times in positive and 3 times in negative direction per axis, 3 axes					
Humid heat, cyclic according to DIN EN 60068-2-30:2006		Variant 2 +25 °C to +55 °C, 90% to 97% relative humidity, 2 cycles of 24 hours each					

hydraulic (measured with HLP 46, $\vartheta_{oil} = 40 \text{ °C} \pm 5 \text{ °C}$)

Maximum operating pressure	– Pilot control valve	Pilot oil supply ²⁾	bar	25 to 315					
	– Main valve, port P, A, B		bar	315	350	350	210	350	350
Maximum return flow pressure	– Port T	Pilot oil return, internal	bar	Static < 10					
		Pilot oil return, external	bar	315	250	250	210	250	250
	– Port Y		bar	Static < 10					
Rated flow $q_{Vnom} \pm 10\%$ at $\Delta p = 10$ bar Δp = valve pressure differential in bar			l/min	– 25 50 100	125 150 200 220	– – 220 350	– – – 500	– – 400 600	– – – 1000
Recommended maximum flow			l/min	170	460	870	1000	1600	3000
Pilot oil flow at port X and/or Y with stepped input signal from 0 to 100% (315 bar)			l/min	7	14	20	20	27	29
Hydraulic fluid				See table page 6					
Hydraulic fluid temperature range (at the valve working ports)			°C	–20 to +80, preferably +40 to +80					
Viscosity range			mm ² /s	20 to 380, preferably 30 to 45					
Maximum admissible degree of contamination of the hydraulic fluid - cleanliness class according to ISO 4406 (c)				Pilot control valve: Class 18/16/13 ³⁾ Main stage: Class 20/18/15 ³⁾					
Hysteresis			%	≤ 0.1					
Response sensitivity			%	≤ 0.05					
Zero point calibration (ex works) ⁴⁾			%	≤ 1					

¹⁾ With control spool types E, E1, W6 and W8: In longitudinal control spool direction, there is sufficient positive overlap without shock/vibration load; observe the installation orientation with regard to the main direction of acceleration!

²⁾ For perfect system behavior, we recommend an external pilot oil supply for pressures above 210 bar.

³⁾ The cleanliness classes specified for the components must be adhered to in hydraulic systems. Effective filtration prevents faults and at the same time increases the life cycle of the components.
For the selection of the filters see www.boschrexroth.com/filter

⁴⁾ Related to the pressure-signal characteristic curve (control spool V)

Technical data (for applications outside these parameters, please consult us!)

Hydraulic fluid	Classification	Suitable sealing materials	Standards
Mineral oils and related hydrocarbons	HL, HLP	NBR, FKM	DIN 51524
Flame-resistant – containing water	HFC (Fuchs HYDROTHERM 46M, Petrofer Ultra Safe 620)	NBR	ISO 12922
 Important information on hydraulic fluids! - For more information and data on the use of other hydraulic fluids refer to data sheet 90220 or contact us! - There may be limitations regarding the technical valve data (temperature, pressure range, life cycle, maintenance intervals, etc.)! - The flash point of the process and operating medium used must be 40 K higher than the maximum solenoid surface temperature. – Flame-resistant – containing water: Maximum pressure differential per control edge 175 bar. Pressure pre-loading at the tank port >20% of the pressure differential; otherwise, increased cavitation. – Life cycle as compared to operation with mineral oil HL, HLP 50% to 100%			

electric

Voltage type	Direct voltage
Duty cycle	% 100
Maximum coil temperature ¹⁾	°C 150
Maximum power	W 72 (average = 24 W)
Electrical connection	With connector according to DIN EN 175201-804
Protection class of the valve according to EN 60529	IP65 with mating connector mounted and locked

¹⁾ Due to the temperatures occurring at the surfaces of the solenoid coils, the European standards ISO 13732-1 and EN ISO 4413 need to be adhered to!

Connector pin assignment	Contact	Signal with A1	Signal with F1	Signal with A5
Supply voltage	A	24 VDC (18 to 35 VDC); $I_{max} = 3 A$; impulse load = 4 A		
	B	0 V		
Reference (actual value)	C	Reference potential for actual value (contact "F")		Enable 4 to 24 V
Differential amplifier input	D	±10 V	4 to 20 mA	±10 V
(Command value)	E	0 V reference potential (contact "D")		0 V reference potential for pin D and F
Measuring output (actual value)	F	±10 V	4 to 20 mA	±10 V
	PE	Connected to cooling element and valve housing		

Command value: Reference potential at E and positive command value at D result in flow from P → A and B → T.
Reference potential at E and negative command value at D result in flow from P → B and A → T.

Connection cable: Recommendation: – Up to 25 m line length: Type LiYCY 7 x 0.75 mm²
– Up to 50 m line length: Type LiYCY 7 x 1.0 mm²
Only connect the shield to PE on the supply side.

Notice: Electric signals taken out via valve electronics (e.g. actual value) must not be used for switching off safety-relevant machine functions!

Block diagram of the integrated electronics (OBE) type VT 13060-3X/...

1) Only with electronics interface "A5"

2) Only with electronics interfaces "A1" and "F1"
