Pressure relief valve,
pilot operated

Type DB...W65; DBW...W65; DB 20 K

RE 25818

Edition: 2012-07

Replaces: 08.03

H6964

- ▶ Size 10 and 25
- ▶ Component series 1X; 4X
- ▶ Maximum operating pressure 350 bar
- ▶ Maximum flow 400 l/min

Features

- ▶ For subplate mounting
- ▶ Porting pattern according to ISO 6264-06-09-*97 (size 10) and ISO 6264-08-13-*97 (size 25)
- ▶ For threaded connection
- ▶ As screw-in cartridge valve
- ▶ 4 adjustment types for pressure adjustment, optionally:
 - Rotary knob
 - Bushing with hexagon and protective cap
 - Lockable rotary knob with scale
 - Rotary knob with scale
- ▶ 5 pressure ratings
- ▶ Solenoid operated unloading via a built-on directional spool valve

Symbols

Bosch Rexroth AG, RE 25818, edition: 2012-07

Function, section

Valves of type DB and DBW are pilot operated pressure relief valves. They are used for limiting (DB) or limiting and magnetically unloading (DBW) the operating pressure. The valves basically consist of housing (1) and pilot control valve (2) with adjustment type.

Pressure relief valve type DB

The pressure applied to channel P acts on the main spool (3). Via the nozzle bores (4 and 5), the pressure is at the same time applied to the poppet (6). If the pressure in channel P exceeds the value set at spring (7), poppet (6) opens against spring (7). Via the nozzle bores (4 and 5), the hydraulic fluid from channel P now flows into the spring chamber (8). From here, it is led into the tank internally (version "-"), via the control line (9 and 10), or externally (version "Y") via the control line (9 and 11).

Due to the state of equilibrium at the main spool (3), hydraulic fluid flows from channel P to channel T, maintaining the set operating pressure.

A pressure gauge connection (12) allows for the control of the operating pressure.

The pressure relief valve can be unloaded or switched to another pressure (second pressure rating) via port X (13).

Pressure relief valve type DBW (only threaded connection)

The function of this valve is basically the same as that of valve type DB.

The main spool (3) is unloaded by controlling a built-on directional valve.

6/20 DB...W65; DBW...W65; DB 20 K | Pressure relief valve

Technical data

hydraulic			
Hydraulic fluid	Classification	Suitable sealing materials	Standards
Mineral oils	HL, HLP, HLPD, HVLP, HVLPD	NBR, FKM	DIN 51524
Bio-degradable	- Insoluble in water	HETG	VDMA 24568
		HEES	
	- Soluble in water	HEPG	VDMA 24568

 **Important information on hydraulic fluids!**

- ▶ For more information and data on the use of other hydraulic fluids refer to data sheet 90220 or contact us!
- ▶ There may be limitations regarding the technical valve data (temperature, pressure range, service life, maintenance intervals, etc.)!
- ▶ The flash point of the hydraulic fluid used must be 40 K higher than the maximum solenoid surface temperature.

▶ **Environmentally compatible:** When using environmentally compatible hydraulic fluids that are simultaneously zinc-solving, zinc may accumulate (700 mg zinc per pole tube).

Characteristic curves

(measured with HLP46, $\vartheta_{oil} = 40 \pm 5 \text{ }^\circ\text{C}$)

Notice!

The characteristic curves were measured with **external, depressurized pilot oil return**.

With internal pilot oil return, the inlet pressure increases by the output pressure present in port T.

8/20 DB...W65; DBW...W65; DB 20 K | Pressure relief valve

Characteristic curves: Subplate mounting
(measured with HLP46, $\vartheta_{oil} = 40 \pm 5 \text{ }^\circ\text{C}$)

Minimum set pressure and circulation pressure depending on the flow ¹⁾
Standard version

- 1 Size 10

Notice!

The characteristic curves were measured with **external, depressurized pilot oil return.**

With internal pilot oil return, the inlet pressure increases by the output pressure present in port T.

¹⁾ The characteristic curves apply to the pressure at the valve output $p_T = 0 \text{ bar}$ across the entire flow range.

10/20 DB...W65; DBW...W65; DB 20 K | Pressure relief valve

Unit dimensions: Subplate mounting – size 10
(dimensions in mm)

Valve mounting screws (separate order)

For reasons of stability, exclusively the following valve mounting screws may be used:

4 x ISO 4762 - M12 x 50 - 10.9-fIZn-240h-L
with friction coefficient $\mu_{total} = 0.09$ to 0.14 ,
tightening torque $M_A = 75$ Nm ± 10 %,
material no. **R913000283**

Notice!

The tightening torques are guidelines when using screws with the specified friction coefficients and when using a manual torque wrench (tolerance ± 10 %).

Subplates according to data sheet 45064 (separate order)

G 545/01 (G3/8)
G 546/01 (G1/2)
G 565/01 (G3/4)

Required surface quality of the valve mounting face

Item explanations see page 16.

Bosch Rexroth AG, RE 25818, edition: 2012-07

Unit dimensions: Subplate mounting – size 25
(dimensions in mm)

Valve mounting screws (separate order)

For reasons of stability, exclusively the following valve mounting screws may be used:

4 x ISO 4762 - M16 x 50 - 10.9-flZn-240h-L
with friction coefficient $\mu_{\text{total}} = 0.09$ to 0.14 ,
tightening torque $M_A = 185 \text{ Nm} \pm 10 \%$,
material no. **R913000378**

Notice!

The tightening torques are guidelines when using screws with the specified friction coefficients and when using a manual torque wrench (tolerance $\pm 10 \%$).

Subplates according to data sheet 45064 (separate order)

G 408/01 (G3/4)

G 409/01 (G1)

Required surface quality of the valve mounting face

- 6 Adjustment type "3"
- 7 Adjustment type "7"
- 8 Lock nut SW22, tightening torque $M_A = 10^{+5}$ Nm
- 9 Hexagon SW10
- 10 Hexagon SW30, tightening torque $M_A = 50$ Nm
- 11 Space required to remove the key
- 12 Locating pin
- 13 Valve mounting bores
- 14 Pressure gauge connection
- 15 Identical seal rings for ports P and T
- 16 Seal ring for port X
- 17 Setscrew is omitted with internal pilot oil return
- 18 Directional spool valve size 6, see data sheet 23178
- 19 Mating connector **without** circuitry
(separate order, see page 19)
- 20 Mating connector **with** circuitry
(separate order, see page 19)
- 21 Dimension for valve without manual override
- 22 Dimension for valve with manual override "N"
- 23 Dimension for valve with concealed manual override "N9"
- 24 Housing for version "W"
- 25 Space required to remove the mating connector
- 26 Valve contact surface; port A is not bored
- 27 Space required to remove the solenoid coil
- 28 Porting pattern according to ISO 6264-06-09-*-*97
- 29 Porting pattern according to ISO 6264-08-13-*-*97
- 30 Seal ring
- 31 Seal ring (omitted with version "Y")
- 32 Support ring (omitted with version "Y")
- 33 Seal ring
- 34 2 support rings
- 35 Bore for port X not available with version "Y"
- 36 Bore for port Y available with version "XY" and "Y"
- 37 ► Bore X, Y and T optionally at the circumference for version "XY"
► Bore B optionally at the circumference for version "Y"
- 38 Depth of fit
- 39 Bore $\varnothing 2.5$ is only to be bored if necessary
- 40 Port X does not have to be bored for type-examination tested safety valves version "Y...E" as it does not have any function!

18/20 DB...W65; DBW...W65; DB 20 K | Pressure relief valve

Safety instructions: Type-examination tested safety valves type DB 20 K...E, component series 1X according to Pressure Equipment Directive 97/23/EC

- ▶ Before ordering a type-examination tested safety valve, please observe that at the desired **response pressure p** , the maximum admissible **flow $q_{V \max}$** (= numerical value at the position of letter "G" in the part identification) of the safety valve is higher than the maximum possible flow of the system/accumulator to be secured. In this, the corresponding regulations have to be observed!
- ▶ According to the **Pressure Equipment Directive 97/23/EC**, the increase in system pressure caused by the flow must not exceed 10 % of the set response pressure (see part identification).
- ▶ The maximum admissible flow $q_{V \max}$ specified in the part identification must not be exceeded.
- ▶ Discharge lines of safety valves must end in a non-dangerous manner. The accumulation of fluids in the discharge lines must **not** be possible (see AD2000 - data sheet A2).

It is imperative to observe the application notes!

- ▶ In the plant, the response pressure specified in the part identification is set with a flow of 2 l/min.
- ▶ The maximum admissible flow specified in the part identification applies to:
 - External pilot oil return **"Y"** without back pressure in the pilot oil return line:
Admissible back pressure in the discharge line (port T) < 10 bar.
- ▶ By removing a lead seal at the safety valve, the approval according to the Pressure Equipment Directive becomes void
- ▶ Mounting cavities (see page 14 and 15)
- ▶ Basically, the requirements of the pressure equipment directives and of data sheet AD2000 A2 have to be observed!

Bosch Rexroth AG, RE 25818, edition: 2012-07

Mating connectors according to DIN EN 175301-803

For details and more mating connectors see data sheet 08006				
		Material no.		
Color	Without circuitry	With indicator light 12 ... 240 V	With rectifier 12 ... 240 V	With indicator light and Zener diode suppression circuit 24 V
Gray	R901017010	-	-	-
Black	R901017011	R901017022	R901017025	R901017026

General notes

- ▶ The unloading function (directional valve function with version "W") must not be used for safety functions!
- ▶ With version "B", the lowest adjustable pressure (circulation pressure) is set in case of power failure or cable break. With version "A", the pressure relief function is set in case of power failure or cable break.
- ▶ Hydraulic backpressures in port T with internal pilot oil return and/or port Y with external pilot oil return add 1:1 to the response pressure of the valve set at the pilot control.

Example:

Pressure setting of the valve due to spring pretensioning (item 7 on page 5) in the pilot control valve/adjustment type $p_{\text{spring}} = 200 \text{ bar}$

Hydraulic backpressure in port T with internal pilot oil return $p_{\text{hydraulic}} = 50 \text{ bar}$

=> Response pressure = $p_{\text{spring}} + p_{\text{hydraulic}} = 250 \text{ bar}$
