Features

- Pilot operated, 2-stage proportional directional valve with integrated electronics (OBE) with type 4WRZE
- Control of flow direction and size
- Operation by means of proportional solenoids with central thread and detachable coil
- For subplate mounting:
Porting pattern according to ISO 4401
- Manual override, optional
- Spring-centered control spool
- Control electronics
 - Type .WRZE...
 - Integrated electronics (OBE) with voltage or current input (A1 and/or F1)
 - Type .WRZ...
 - Digital or analog amplifier in Euro-card format
 - Analog amplifier in modular design

Ordering codes (types 4WRZ 52 and 4WRH 52; subplate mounting)

¹⁾ Not applicable with types 4WRH

²⁾ For version "J" → "N" instead of "N9"

³⁾ For information on the seawater-resistant version, see data sheet 29115-M

⁴⁾ For version "J" = seawater-resistant **only** "K31"

Electric special types of protection available on request.

Control spool symbols

¹⁾ Not for type 4WRH

With symbols E1- and W8-: P → A: q_V B → T: $q_V/2$
P → B: $q_V/2$ A → R: q_V

With symbols E3- and W9-: P → A: q_V B → T: Blocked
P → B: $q_V/2$ A → R: q_V

(differential circuit, piston top at port A)

Notice:

- Only external pilot oil supply and return possible
- With control spool W6-, W8-, W9-, W6A, there is a connection from A → R and B → T with less than 2% of the respective nominal cross-section in switching position "0".

Function, section

Pilot control valve type 3DREP 6...

The pilot control valve is a 3-way pressure reducing valve that is actuated by a proportional solenoid. It converts an electrical input signal into a proportional pressure output signal and is used for all valves of the type 4WRZ... and 5WRZ...

The proportional solenoids are controllable, wet-pin DC solenoids with a central thread and a detachable coil. The solenoids are controlled by external electronics (type .WRZ...).

Set-up:

The valve basically consists of:

- Housing (1)
- Control spool (2) with pressure measuring spool (3 and 4)
- Solenoids (5 and 6) with central threads

Function:

The pressure in A or B is set by means of the proportional solenoids. The amount of the pressure depends on the current. With de-energized solenoids (5, 6), the control spool (2) is held in the central position by means of the pressure springs (8). Ports A and B are connected with T so that the hydraulic fluid can flow to the tank without obstructions.

By energizing a proportional solenoid, e.g. solenoid "a" (5), the pressure measuring spool (3) and with it the control spool (2) are moved to the right. This opens the connection from P to B and A to T via orifice-type cross-sections with progressive flow characteristic. With the surface of the pressure measuring spool (4) the pressure that builds up in channel B acts on the control spool and against the solenoid force. The pressure measuring spool (4) is supported by solenoid "b". If the pressure exceeds the value set at solenoid "a", the control spool (2) is pushed back against the solenoid force and connects B with T until the set pressure is reached again. The pressure is proportional to the solenoid current.

When the solenoid is switched off, the control spool (2) is returned into the central position by the compression springs (8).

Pilot control valve with two switching positions

(type 3DREP 6...B...)

The operation of this valve version basically corresponds to the valve with 3 switching positions. However, this 2 spool position valve is only equipped with solenoid "a" (5). In the place of the second proportional solenoid there is a plug screw (9).

Information on type 3DREP 6:

Prevent the tank line from draining. If this is possible due to installation conditions, install a preload valve (with a preload pressure of approx. 2 bar).

Function, section

Pilot control valve type 3DREPE 6...

The pilot control valve is a 3-way pressure reducing valve that is actuated by a proportional solenoid. It converts an electrical input signal into a proportional pressure output signal and is used for all valves of the type 4WRZE... and 5WRZE...

The proportional solenoids are controllable, wet-pin DC solenoids with a central thread and a detachable coil. The solenoids are controlled by the integrated electronics (type .WRZE...).

Set-up:

The valve basically consists of:

- Housing (1)
- Control spool (2) with pressure measuring spool (3 and 4)
- Solenoids (5 and 6) with central threads
- Integrated electronics (7)

Function:

The pressure in A or B is set by means of the proportional solenoids. The amount of the pressure depends on the current. With de-energized solenoids (5, 6), the control spool (2) is held in the central position by means of the pressure springs (8). Ports A and B are connected with T so that the hydraulic fluid can flow to the tank without obstructions.

By energizing a proportional solenoid, e.g. solenoid "a" (5), the pressure measuring spool (3) and with it the control spool (2) are moved to the right. This opens the connection from P to B and A to T via orifice-type cross-sections with progressive flow characteristic. With the surface of the pressure measuring spool (4) the pressure that builds up in channel B acts on the control spool and against the solenoid force. The pressure measuring spool (4) is supported by solenoid "b". If the pressure exceeds the value set at solenoid "a", the control spool (2) is pushed back against the solenoid force and connects B with T until the set pressure is reached again. The pressure is proportional to the solenoid current.

When the solenoid is switched off, the control spool (2) is returned into the central position by the compression springs (8).

Function, section

Pilot operated proportional directional valves

Types 4WRZ... and 5WRZ.52...

Valves of type 4WRZ... are pilot operated 4-way directional valves that are actuated by proportional solenoids. They control the flow direction and size.

Valves of type 5WRZ... are equipped with an additional port "R" (only size 52).

Set-up:

The valve basically consists of:

- Pilot control valve (9) with proportional solenoids (5 and 6)
- Main valve (10) with main control spool (11) and centering spring (12)

Notice!

Due to the design principle, internal leakage is inherent to the valves, which may increase over the life cycle.

Function:

- With de-energized solenoids (5, 6), the main control spool (11) is held in the center position by means of the centering spring (12).
- The main control spool (11) is controlled by the pilot control valve (9); the main control spool is proportionally moved, e.g. by actuating solenoid "b" (6).
 - The control spool (2) is moved to the right, pilot oil enters the pressure chamber (13) via the pilot control valve (9) and deflects the main control spool (11) according to the electric input signal.
 - This opens the connection from P to B and A to T via orifice-type cross-sections with progressive flow characteristic.
- Pilot oil is internally supplied to the pilot control valve from port P or externally via port X.
- Switching the solenoid off (6)
 - The control spool (2) and main control spool (11) are moved back into the central position.
- Depending on the switching position, flow occurs from P to A and B to T or P to B and A to T (R).

An optional manual override (14 and 15) can be used to move the control spool (2) without solenoid energization.

Notice:

Inadvertent activation of the manual override may result in uncontrollable machine movements.

Function, section

Externally pilot operated proportional directional valves Types 4WRH... and 5WRH.52...

Valves of the type .WRH... are pilot operated proportional directional valves for external actuation via pressure control valves.

Set-up:

The valve basically consists of:

- Main valve (10) with main control spool (11) and centering spring (12)
- Diversion plate (16)

Notice!

Due to the design principle, internal leakage is inherent to the valves, which may increase over the life cycle.

Function:

- The diversion plate (16) connects control port A that leads to the pressure chamber (13) with port Y and control port B with port X.
- If port X is pressurized, the main control spool (11) is moved to the right (P to B and A to T). If port Y is pressurized, the main control spool is moved to the left (P to A and B to T).

The pilot pressure at the main valve must not exceed 25 bar (16 bar with size 52)!

Type .WRH...-7X/...

Hydraulic fluid		See table below					
Hydraulic fluid temperature range (at the valve working ports)	°C	-20 to +80 (preferably +40 to +50)					
Viscosity range	mm ² /s	20 to 380 (preferably 30 to 46)					
Maximum admissible degree of contamination of the hydraulic fluid, cleanliness class according to ISO 4406 (c)							
	– Pilot control valve	Class 18/16/13 ¹⁾					
	– Main valve	Class 20/18/15 ¹⁾					
Hysteresis	%	≤ 6					

¹⁾ The cleanliness classes specified for the components must be adhered to in hydraulic systems. Effective filtration prevents faults and at the same time increases the life cycle of the components.
For the selection of the filters, see www.boschrexroth.com/filter

Hydraulic fluid	Classification	Suitable sealing materials	Standards
Mineral oils and related hydrocarbons	HL, HLP	NBR, FKM	DIN 51524
Flame-resistant – containing water	HFC (Fuchs HYDROTHERM 46M, Petrofer Ultra Safe 620)	NBR	ISO 12922

Important information on hydraulic fluids!

- For more information and data on the use of other hydraulic fluids refer to data sheet 90220 or contact us!
- There may be limitations regarding the technical valve data (temperature, pressure range, life cycle, maintenance intervals, etc.)!
- The flash point of the process and operating medium used must be 40 K greater than the maximum solenoid surface temperature.

- **Flame-resistant – containing water:** The maximum pressure differential per control edge is 175 bar. Pressure pre-loading at the tank port > 20% of the pressure differential; otherwise, increased cavitation.
- Life cycle as compared to operation with mineral oil HL, HLP 50% to 100%

Technical data (for applications outside these parameters, please consult us!)

¹⁾ With Bosch Rexroth AG control electronics

²⁾ Separate order

³⁾ Due to the temperatures occurring at the surfaces of the solenoid coils, the European standards ISO 13732-1 and EN 982 need to be adhered to.

Electrical connection

For type .WRZ... (for external electronics – **not** with version "J" = seawater-resistant)

For mating connectors, see page 27

For type .WRZ... (for external electronics – with version "J" = seawater-resistant)

For mating connectors, see page 27

Contact	Connection with
A	Solenoid A
B	Solenoid B
C	Solenoid A
D	Solenoid B
E	n.c.
F	n.c.
PE	Valve housing

For type .WRZE... (with integrated electronics (OBE) and with version "J" = seawater-resistant)

For mating connectors, see page 27

Connector pin assignment	Contact	Signal with A1	Signal at F1
Supply voltage	A	24 VDC ($u(t) = 19.4$ to 35 V); $I_{max} = 2$ A	
	B	0 V	
Reference (actual value)	C	Cannot be used ¹⁾	
Differential amplifier input	D	± 10 V; $R_g > 50$ k Ω	4 to 20 mA; $R_g > 100$ Ω
(Command value)	E	Command value reference potential	
	F	Cannot be used ¹⁾	
Protective grounding conductor	PE	Connected to cooling element and valve housing	

¹⁾ Contacts C and F must not be connected!

Command value: A positive command value (0 to 10 V or 12 to 20 mA) at D and a reference potential at E result in a flow from P to A and B to T.

A negative command value (0 to -10 V or 12 to 4 mA) at D and a reference potential at E result in a flow from P to B and A to T.

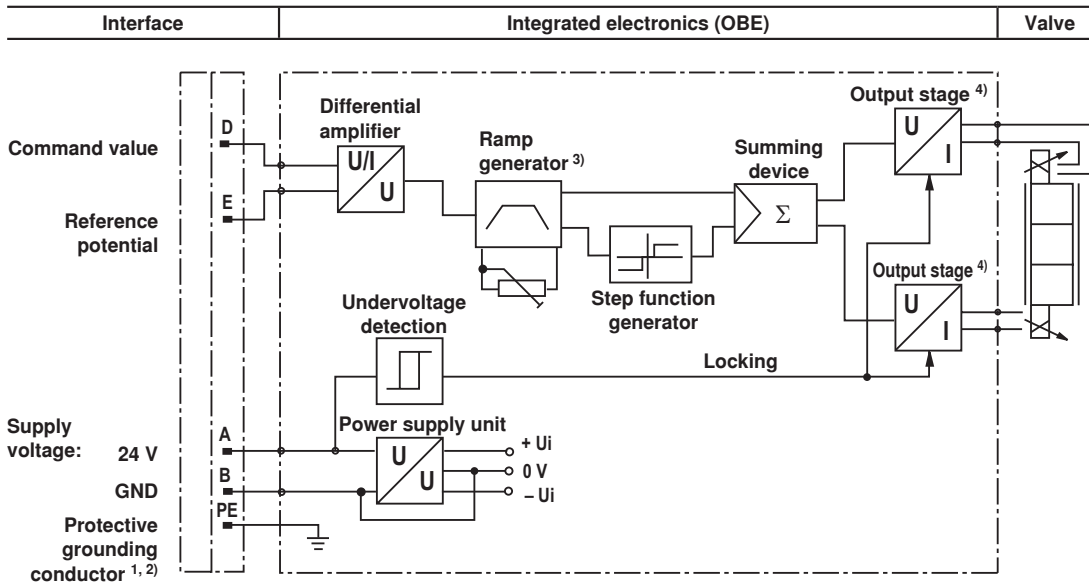

If the valve and the solenoid are on side "a" (control spool variants EA and W6A), a positive command value at D and a reference potential at E result in flow from P to B and A to T.

Connection cable: Recommendation: – Up to 25 m cable length, type LiYCY 5 x 0.75 mm²
– Up to 50 m 25 m cable length, type LiYCY 5 x 1.0 mm²

External diameter 6.5 to 11 mm

Only install the shield on the supply side on the protective grounding conductor.

Block diagram of the integrated electronics (OBE) for type WRZE

- 1) Port PE is connected to the cooling element and the valve housing
- 2) The protective grounding conductor is screwed to the valve housing and cover
- 3) Ramp can be set from 0 to 2.5 s from the outside, identical for T_{up} and T_{down}
- 4) The output stages are current-controlled

Characteristic curves size 10 (control spool "E, W6-, EA, W6A" as well as HLP46, $\dot{v}_{oil} = 40 \text{ }^\circ\text{C} \pm 5 \text{ }^\circ\text{C}$ and $p = 100 \text{ bar}$)

Dimensions: Size 10 (dimensions in mm)

- 1 Main valve
- 2 Pilot control valve
- 3 Dimension for version "4WRZ..." (**not** seawater-resistant)
- 4 Dimension for version "4WRZE..."
- 5 Proportional solenoid "a"
- 6 Proportional solenoid "b"
- 7 Mating connector "A", separate order, see page 27
- 8 Mating connector "B", separate order, see page 27
- 9 Mating connector, separate order, see page 27
- 10 Concealed manual override "N9"
- 11 Plug screw for valves with one solenoid
- 12 Name plate for pilot control valve
- 13 Name plate for main valve
- 14 Integrated electronics (OBE)

- 15 Pressure reducing valve "D3"
- 16 Identical seal rings for ports A, B, P, T, and T1
- 17 Identical seal rings for ports X and Y
- 18 Space required to remove the mating connector
- 19 Diversion plate (type 4WRH...)
- 20 Machined installation surface, porting pattern according to ISO 4401-05-05-0-05, ports X and Y as required

Required surface quality of the valve contact surface

For subplates and valve mounting screws, see page 27

Dimensions: Size 25 (dimensions in mm)

Accessories (not included in the scope of delivery)

Mating connectors		Material number
Mating connector for 4WRZ	DIN EN 175301-803	Solenoid "a", grey R901017010
		Solenoid "b", black R901017011
Mating connector for 4WRZE and 4WRZE...J...	DIN EN 175201-804	e.g. R900021267 (plastic)
		e.g. R900223890 (metal)

Hexagon socket head cap screws		Material number
Size 10	4x ISO 4762 - M6 x 45 - 10.9-flZn-240h-L Tightening torque $M_A = 13.5 \text{ Nm} \pm 10\%$ or 4x ISO 4762 - M6 x 45 - 10.9 Tightening torque $M_A = 15.5 \text{ Nm} \pm 10\%$	R913000258
Size 16	2x ISO 4762 - M6 x 60 - 10.9-flZn-240h-L Tightening torque $M_A = 12.2 \text{ Nm} \pm 10\%$	R913000115
	4x ISO 4762 - M10 x 60 - 10.9-flZn-240h-L Tightening torque $M_A = 58 \text{ Nm} \pm 20\%$ or 2x ISO 4762 - M6 x 60 - 10.9 Tightening torque $M_A = 15.5 \text{ Nm} \pm 10\%$ 4x ISO 4762 - M10 x 60 - 10.9 Tightening torque $M_A = 75 \text{ Nm} \pm 20\%$	R913000116
Size 25	6x ISO 4762 - M12 x 60 - 10.9-flZn-240h-L Tightening torque $M_A = 100 \text{ Nm} \pm 20\%$ or 6x ISO 4762 - M12 x 60 - 10.9 Tightening torque $M_A = 130 \text{ Nm} \pm 20\%$	R913000121
Size 32	6x ISO 4762 - M20 x 80 - 10.9-flZn-240h-L Tightening torque $M_A = 340 \text{ Nm} \pm 20\%$ or 6x ISO 4762 - M20 x 80 - 10.9 Tightening torque $M_A = 430 \text{ Nm} \pm 20\%$	R901035246
Size 52 (5WRZ52)	With a steel installation surface: 7x ISO 4762 - M20 x 90 - 10.9-flZn-240h-L Tightening torque $M_A = 465 \text{ Nm} \pm 20\%$	R913000397
	With a cast iron installation surface: 7x ISO 4762 - M20 x 100 - 10.9-flZn-240h-L Tightening torque $M_A = 465 \text{ Nm} \pm 20\%$ or With a steel installation surface: 7x ISO 4762 - M20 x 90 - 10.9 Tightening torque $M_A = 610 \text{ Nm} \pm 20\%$	
	With a cast iron installation surface: 7x ISO 4762 - M20 x 100 - 10.9 Tightening torque $M_A = 610 \text{ Nm} \pm 20\%$	R913000386
Size 52 (4WRZ52)	4x ISO 4762 - M12 x 70 - 10.9-flZn-240h-L Tightening torque $M_A = 100 \text{ Nm} \pm 20\%$ or 4x ISO 4762 - M12 x 70 - 10.9 Tightening torque $M_A = 130 \text{ Nm} \pm 20\%$	R913000515

When using type 4WRZ..., use the following throttle inserts in channel A and B of the pilot control valve:

Subplates/connection flanges	Data sheet
Size 10	45054
Size 16	45056
Size 25	45058
Size 32	45060
Size 52	45501

Throttle insert	Ø in mm	Material number
Size 10	1.8	R900158510
Size 16	2.0	R900158547
Size 25	2.8	R900157948
Size 32	-	-
Size 52	-	-
