Type 4WRPEH

RE 29121

Edition: 2018-01

Replaces: 2017-05

- ▶ Size 6
- ▶ Component series 3X
- ▶ Maximum operating pressure 350 bar
- ▶ Rated flow 4 ... 40 l/min

Features

- ▶ Reliable - proven and robust design
- ▶ Safe - fail-safe position of the control spool in switched-off condition
- ▶ Energy-efficient - no pilot oil demand
- ▶ High quality - control spool and sleeve in servo quality
- ▶ Flexible - suitable for position, velocity and pressure control
- ▶ Precise - high response sensitivity and little hysteresis
- ▶ IO-Link interface, optional

Flow characteristic

4/22 **4WRPEH** | Directional control valve

Function, section

Valves of type 4WRPEH are direct operated directional control valves with electrical position feedback and integrated electronics (OBE).

Set-up

The 4WRPEH high-response valve mainly consists of:

- ▶ Valve housing with control spool and sleeve in servo quality (1)
- ▶ Control solenoid with position transducer (2) (optionally with electronics protection membrane (5))
- ▶ On-board electronics (OBE) (3) with analog or IO-Link interface (4) (optionally with damping plate (6))

Function

The integrated electronics (OBE) compares the specified command value to the position actual value. In case of control deviations, the stroke solenoid will be activated. Due to the changed solenoid force, the control spool is adjusted against the spring. Stroke/control spool cross-section is controlled proportionally to the command value. In case of a command value presetting of 0, the electronics adjusts the control spool against the spring to central position. In deactivated condition, the spring is untensioned to a maximum and the valve is in fail-safe position.

Control solenoid shut-off

In case of the following errors, the control solenoid is de-energized by the integrated electronics (OBE) and the control spool is set to fail-safe position:

- ▶ Falling below the minimum supply voltage
- ▶ Only at interface "F1":
 - Falling below the minimum current command value of 2 mA (includes cable break of the command value line (current loop))
- ▶ Only at interface "L1":
 - Enable inactive, communication interruption (watchdog)
 - In case of internal IO-Link error

Damping plate "D"

The damping plate reduces the acceleration amplitudes on the on-board electronics (frequencies >300 Hz).

Notice:

Use of the damping plate is not recommended for applications with mainly low-frequency excitation <300 Hz

Electronics protection membrane "-967"

To prevent condensate formation in the housing of the integrated electronics (OBE), an electronics protection membrane (5) can be used.

Recommended for use outside industry-standard conditions with high ambient air humidity and significant cyclic temperature changes (e.g. outdoors).

Important information on hydraulic fluids:

- For further information and data on the use of other hydraulic fluids, please refer to the data sheets above or contact us!
- There may be limitations regarding the technical valve data (temperature, pressure range, life cycle, maintenance intervals, etc.)!
- The ignition temperature of the hydraulic fluid used must be 40 K higher than the maximum solenoid surface temperature.

► Flame-resistant – containing water:

- Maximum operating pressure 210 bar
- Maximum pressure differential per control edge 175 bar
- Pressure pre-loading at the tank port >20% of the pressure differential, otherwise increased cavitation erosion
- Life cycle as compared to operation with mineral oil HL, HLP 50 ... 100%
- Maximum hydraulic fluid temperature 50 °C
