

## Pressure Switch EDS 3300

Flush membrane  
Up to 2 switching outputs  
Analogue output

### Description:

The electronic pressure switch EDS 3300 with a flush membrane was designed specifically for applications in which a standard pressure port could become blocked, clogged or frozen by the particular medium used.

Further applications include processes where the medium changes frequently and any residues could cause mixing or contamination of the media.

Like the standard model, the EDS 3300 with flush membrane has a ceramic measurement cell with a thick-layer strain gauge for relative pressure measurement in a low pressure range.

The pressure port is achieved with a fully sealed stainless steel front membrane filled internally with a pressure transfer fluid. The process pressure is transmitted hydrostatically to the measurement cell via the pressure transfer fluid.

Depending on the type, the instrument can have up to two switching outputs and a switchable analogue output (4 .. 20 mA or 0 .. 10 V).
