# Features

- Page Pilot valve
  - Mounting cavity R/T-8A
  - Direct operated directional spool valve with solenoid actuation

H7118

- Fluid can flow through the valve in both directions
- Positive overlap prevents switching shocks
- Wet-pin DC solenoids
- Solenoid coil can be rotated
- With concealed manual override, optional

#### Function, section, symbols

#### General

2/2 directional spool valves are direct operated, pressure-balanced cartridge valves. They control the start, stop and direction of a flow and basically consist of housing (1), pilot spool (2) and return spring (3).

#### Function

(2`

(1

In the non-operated state, pilot spool (2) is held by return spring (3) in the initial position. Pilot spool (2) is operated by means of wet-pin DC solenoid (4). The various symbols refer to corresponding spools (N and P). Service ports 1 and 2 can be continuously pressurised to an operating pressure of 250 bar, and the flow can be directed in both directions (see symbols). With the help of manual override (5) the valve can be operated without energisation of the solenoid.

### Technical data (for applications outside these parameters, please consult us!)

#### General

Weight	- Valve	kg	0.15
	– Coil	kg	0.20
Installation orientation			Optional
Ambient terr	perature range	°C	-40 to +120

#### Hydraulic

Maximum operating pressure	bar	250 (in all ports)
Maximum flow	l/min	25
Hydraulic fluid		Mineral oil (HL, HLP) to DIN 51524; fast bio-degradable hydraulic fluids to VDMA 24568 (see also RE 90221); HETG (rape seed oil); HEPG (polyglycols); HEES (synthetic esters); other hydraulic fluids on enquiry
Hydraulic fluid temperature range	°C	-40 to +80
Viscosity range	mm²/s	4 to 500
Max. permissible degree of contamination of the hy- draulic fluid - cleanliness class to ISO 4406 (c)		Class 20/18/15 <sup>1)</sup>
Load cycles		1.5 million

#### Electrical

Type of voltage		DC voltage	
Supply voltage <sup>2)</sup> V		12 DC; 24 DC	
Voltage tolerance vs. ambient temperature		see characteristic curve on page 5	
Power consumption W		18	
Duty cycle %		see characteristic curve on page 5	
Maximum coil temperature <sup>3)</sup> °C		150	
Switching time to ISO 6403 (solenoid horizontal)	– ON	ms	≤ 80
	– OFF	ms	≤ 50
Maximum switching frequency 1/h		15000	
Type of protection to VDE 0470-1 (DIN EN 60529) DIN 40050-9	– Version "K4"		IP 65 with cable socket mounted and locked
	– Version "C4"		IP 66 with cable socket mounted and locked
			IP 69K with Rexroth cable socket (Material no. R901022127)
	– Version "K40"		IP 69K with cable socket mounted and locked

<sup>1)</sup> The cleanliness classes specified for components must be adhered to in hydraulic systems. Effective filtration prevents malfunction and, at the same time, prolongs the service life of components. With electrical connection "K4", the protective conductor (PE 느) must be properly connected.

For the selection of filters, see data sheets RE 50070, RE 50076, RE 50081, RE 50086, RE 50087 and RE 50088.

<sup>2)</sup> Further voltages on enquiry

<sup>3)</sup> Due to the surface temperatures of solenoid coils, observe European standards EN563 and EN982!

RE 18136-16/02.07 | KKDE

#### Voltage tolerance vs. ambient temperature; duty cycle

Voltage range and duty cycle in dependence on ambient temperature

1 Maximum voltage

- 2 Duty cycle
- 3 Minimum operate voltage
- 4 Extension of duty cycle possible in the case of better heat dissipation Permissible supply voltage range

#### If Note!

The diagram was determined for a coil with valve and medium test block size (110 x 70 x 66) without flow in static air.

Depending on the installation conditions (block size, flow, air circulation, etc.), a better heat dissipation may be achieved. This results in an extended operating range.

In individual cases, more unfvourable conditions may prevail, which result in a restriction of the operating range.
