RE 21468

Edition: 2024-02 Replaces: 2022-09

Check valve, pilot operated

Type SV and SL

- ▶ Size 10, 20, and 32
- ► Component series 4X
- ► Maximum operating pressure 350 bar
- ► Maximum flow 550 l/min

Features

- ► For subplate mounting
- ▶ Porting pattern
 - ISO 5781-06-07-0-16 (NG10)
 - ISO 5781-08-10-0-16 (NG20)
 - ISO 5781-09-13-0-16 (NG32)
- ► For threaded connection
- Attachment possibility for directional spool valve or directional seat valve, optional
- ▶ With internal or external pilot oil return, optional
- ► Version with pre-opening for dampened release, optional
- ▶ Various cracking pressures, optional
- ► Check valve cartridge separately available
- ► Corrosion-resistant housing design, optional

Notice: ♦ = Preferred type

Symbols

Version "SV" (internal pilot oil return)

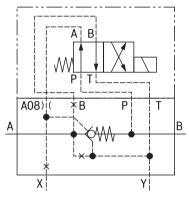

Version "SL" (external pilot oil return)

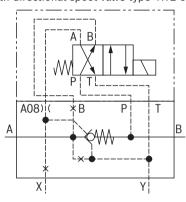

Version "SL ...6U"

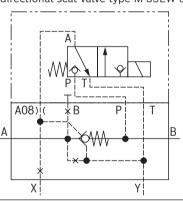

With directional spool valve type 4WE 6 D...

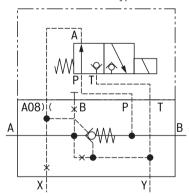

With directional spool valve type 4WE 6 Y...

With directional seat valve type M-3SEW 6 C...

With directional seat valve type M-3SEW 6 U...

Function, section

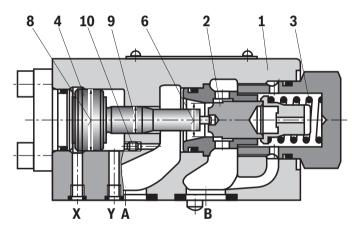

The check valves type SV and SL are releasable check valves for subplate mounting or threaded connection. They are used for the leakage-free blocking of an actuator port, also in case of longer standstill times.

The valves basically consist of a housing (1), a seat poppet (2), a compression spring (3), a control spool (4) as well as of an optional pre-opening as ball seat valve (5). The flow can pass through the seat valve without external pilot pressure in the direction $A \rightarrow B$ (condition:

 $p_A > p_B$ + cracking pressure (compression spring)). In the opposite direction, the seat valve closes hydraulically tight.

A sufficiently high pilot pressure at port X moves the control spool (4) in the direction of the ball seat valve (5) (version "A") and pushes the seat poppet (2) out of its seat. This allows for a free flow in both directions (active keeping open).

In order to ensure that the seat valve actively opens, the pressure ratios on both sides of the control spool (4) are just as important as the area ratios at the control spool (4) or seat poppet (2).

Type SL..PB.-4X... (with pilot oil return, without pre-opening)

Type SV 10 PA.-4X... (without pilot oil return, with pre-opening)

This results in the following available options for the types

- ▶ SV (large annulus area A_3 (8) connected with p_A) or
- ► SL (small annulus area **A**₄ (9))

as well as for the versions with pre-opening "A" and without pre-opening "B".

Version "A" (with pre-opening)

This valve is provided with an additional pre-opening. By pressurization at the X port, the control spool (4) is moved to the right. As a result, the ball (5) is pushed off the seat first followed by the seat poppet (2).

Motice:

- ► Version "A":
 - The two-stage set-up with an increased control open ratio means even low pilot pressure can be unloaded securely.
 - Avoidance of switching shocks due to dampened decompression of the pressure volume on the actuator side.
- ▶ Version "B":
 - In case of valves without pre-opening, the included pressure volume may be unloaded suddenly. Resulting switching shocks may lead to premature wear on installed components, as well as noise formation.

The modification of type SV to type SL is possible by exchange of plugs (10) and (11). One of the two plugs must always be installed.

NG	Plug (10)	Plug (11)
10	M3	M6
20	M4	M6
32	M4	M6

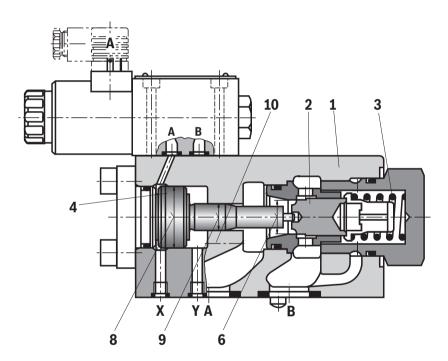

- **6** Area A_1 (seat poppet)
- 7 Area A_2 (ball)
- 8 Area A₃ (control spool)
- 9 Area A₄ (control spool)

Function, section: version "6U" (with built-on directional valve)

At direct operated, releasable check valves type SL with built-on directional valve, the control spool (4) may be controlled directly via the directional valve to open the seat poppet (2) against the system pressure, i.e. the blocking direction.

Motice:

When ordering the directional valve, please observe the different position of port A in versions "P" and "G" (porting pattern rotated by 180° in version "G", see pages 14 and 15).

Type SL..PB.-4X/6U... (with pilot oil return, without pre-opening)

- **6** Area A_1 (seat poppet)
- 8 Area A₃ (control spool)
- **9** Area **A**₄ (control spool)

¹⁾ The product fulfills the substance requirements of the RoHS Directive 2011/65/EU

²⁾ The cleanliness classes specified for the components must be adhered to in hydraulic systems. Effective filtration prevents faults and at the same time increases the life cycle of the components.

Technical data

Important information on hydraulic fluids:

- ► For further information and data on the use of other hydraulic fluids, please refer to the data sheets above or contact us.
- ► There may be limitations regarding the technical valve data (temperature, pressure range, life cycle, maintenance intervals, etc.).
- ► The ignition temperature of the hydraulic fluid used must be 50 K higher than the maximum surface temperature.
- ▶ Bio-degradable and flame-resistant containing water:

 If components with galvanic zinc coating (e.g. version "J3" or "J5") or parts containing zinc are used, small amounts of dissolved zinc may get into the hydraulic system and cause accelerated aging of the hydraulic fluid. Zinc soap may form as a chemical reaction product, which may clog filters, nozzles and solenoid valves particularly in connection with local heat input.

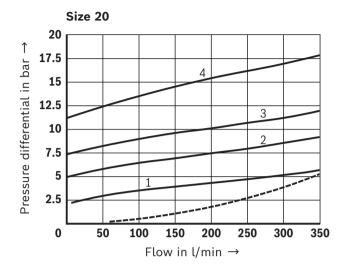

► Flame-resistant – containing water:

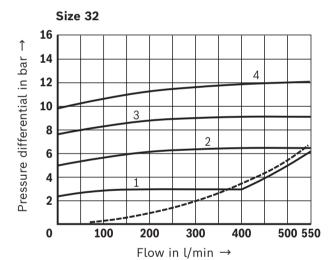

Due to the increased cavitation tendency with HFC hydraulic fluids, the life cycle of the component may be reduced by up to 30% as compared to the use with mineral oil HLP. In order to reduce the cavitation effect, it is recommended – if possible considering conditions specific to the installation – to back up the return flow pressure in ports T to approx. 20% of the pressure differential at the component.

- **Dimensions**
 - 1 Port Y at version "SL" (closed at version "SV")
 - 2 Name plate
 - 3 Locking pin
 - 4 Identical seal rings for ports
 - ► A and B
 - ► X and Y
 - **5** Valve with cracking pressure version "1" and "2"
 - 6 Valve with cracking pressure version "3" and "4"
 - 7.1 6 valve mounting bores at NG32
 - 7.2 2 valve mounting bores

- 8 Porting pattern according to ISO 5781
- 9 Version without position switch
- **10** Version with position switch "QMG24" (circuitry see page 17)
- 11 Directional seat valve type M-3SEW 6 ... (data sheet 22058)
- 12 Directional spool valve type 4WE 6 ... (data sheet 23178)
- 13 Porting pattern according to ISO 4401-03-02-0-05

Valve mounting screws (separate order)

Size	Quantity	Hexagon socket head cap screws	Material number
10	4	ISO 4762 - M10 x 50 - 10.9 - flZn/nc/480h/C	R913015580
		Friction coefficient μ_{total} = 0.09 0.14; tightening torque M_A = 58 Nm ±10%	
20	4	ISO 4762 - M10 x 70 - 10.9 - flZn/nc/480h/C	R913014772
		Friction coefficient μ_{total} = 0.09 0.14; tightening torque M_A = 58 Nm ±10%	
32	6	ISO 4762 - M10 x 85 - 10.9 - flZn/nc/480h/C	R913015584
		Friction coefficient μ_{total} = 0.09 0.14; tightening torque M_A = 58 Nm ±10%	

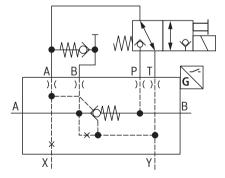

The specified tightening torques were calculated with the total friction coefficient μ = 0.09 ... 0.14; adapt to modified surfaces.

Subplates (separate order) see data sheet 45100.

Circuit example

Function: "load locking"; inlet side unloading

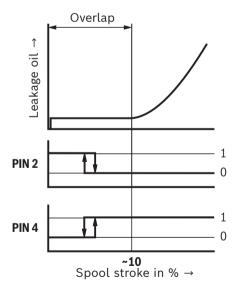

Inductive position switch type QM: Electrical connection

The electrical connection is realized via a 4-pole mating connector (separate order, see data sheet 08006) with connection thread M12 \times 1.

Connection voltage	24 V _{-15%} , DC voltage
Admissible residual ripple	≤ 10%
Load capacity	Maximum 400 mA
Switching outputs	PNP transistor outputs, load between switching outputs and GND
1 +Ub 2 GND	
Pinout	1 +24 V
4 3	2 Switching output: 400 mA
$\langle \mathcal{P}_{10} \rangle$	3 0 V, GND
1 2	4 Switching output: 400 mA

Inductive position switch type QM: Switching logics
