Edition: 2021-05 Replaces: 2013-04

Directional spool valves, direct operated, with manual and fluidic operation

Type WMM, WN and WP

- ▶ Size 10
- ► Component series 5X
- ► Maximum operating pressure 350 bar
- ► Maximum flow 160 l/min

Features

- ▶ 4/3-, 4/2- or 3/2-way version
- ▶ Porting pattern according to ISO 4401-05-04-0-05
- ► Types of actuation:
 - Hand lever
 - Pneumatic
 - Hydraulic

1 1101	oit port	
10	Whitworth pipe thread G1/4	-
	UNF thread 7/16" - 20 UNF (only versions "WN" and "WP")	/12
11	Further details in the plain text	

When the admissible valve performance limits are exceeded, installation of throttle inserts is to be intended (performance limits see page 10).

OF

When throttle inserts are used in channel T, the pressure in the working ports and in case of connection to the tank chambers must not exceed 210 bar.

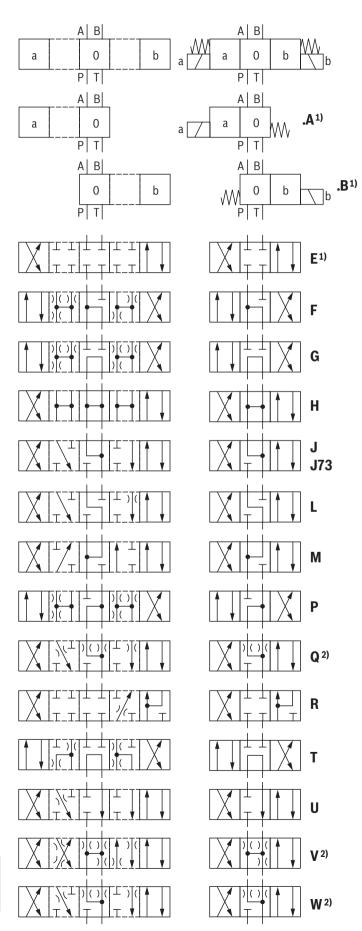

Symbols

- 1) Example:
 - Symbol E with spool position "a": ordering code ..**EA**..
 - Symbol E with switching position "b": ordering code ..**EB**..
- 2) Flow cross-section see page 7

Motice:

Representation according to DIN ISO 1219-1. Hydraulic interim positions are shown by dashes.

Function, section

Valves of type WMM are manually control spool (3), and one or two return springs (4). actuated directional spool valves, When de-energized, the control spool (3) is held in the valves of type WN and WP are fluidically central position or in the initial position by the return actuated directional spool valves. springs (4) (except for version "O"). They control the start, stop and The control spool (3) is moved to the desired spool direction of a flow. position by means of the types of actuation. The directional valves basically consist of housing (1), one type of actuation (2.1) (hand lever) or two types of actuation (2.2) (hydraulic, pneumatic actuation cylinder), 2.1 4 Type 4WMM 10 D5X/F/... TB

P B

Throttle insert

The use of a throttle insert is required when, due to prevailing operating conditions, flows occur during the switching processes which exceed the performance limit of the valve.

¹⁾ The information given only applies if the actuation pressure is applied directly to the valve.

For the selection of filters, see www.boschrexroth.com/filter.

²⁾ The cleanliness classes specified for the components must be adhered to in hydraulic systems. Effective filtration prevents faults and simultaneously increases the life cycle of the components.

	► Containing water	HFC (Fuchs: Hydrotherm 46M, Renosafe 500; Petrofer: Ultra Safe 620; Houghton: Safe 620; Union: Carbide HP5046)	NBR	ISO 12922	90223

Important information on hydraulic fluids:

- ► For further information and data on the use of other hydraulic fluids, please refer to the data sheets above or contact us.
- ► There may be limitations regarding the technical valve data (temperature, pressure range, life cycle, maintenance intervals, etc.).
- ► The ignition temperature of the hydraulic fluid used must be 50 K higher than the maximum surface temperature.
- ▶ Bio-degradable and flame-resistant containing water:

 If components with galvanic zinc coating (e.g. version "J3" or "J5") or parts containing zinc are used, small amounts of dissolved zinc may get into the hydraulic system and cause accelerated aging of the hydraulic fluid. Zinc soap may form as a chemical reaction product, which may clog filters, nozzles and solenoid valves particularly in connection with local heat input.

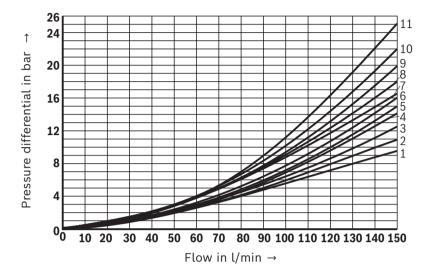

► Flame-resistant - containing water:

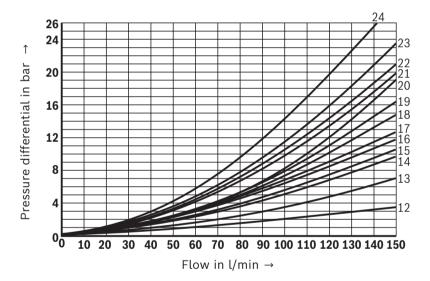

- Due to the increased cavitation tendency with HFC hydraulic fluids, the life cycle of the component may be reduced by up to 30% as compared to the use with mineral oil HLP. In order to reduce the cavitation effect, it is recommended if possible specific to the installation backing up the return flow pressure in ports T to approx. 20% of the pressure differential at the component.
- Dependent on the hydraulic fluid used, the maximum ambient and hydraulic fluid temperature must not exceed 50 °C.
 In order to reduce the heat input into the component, a maximum duty cycle of 50% in continuous operation has to be set for on/off valves (measuring time 300 s). If this is impossible due to the function, an energy-reducing control of these components is recommended, e.g. via a PWM plug-in amplifier.

Performance limits

(measured with HLP46, ϑ_{oil} = 40 ±5 °C)

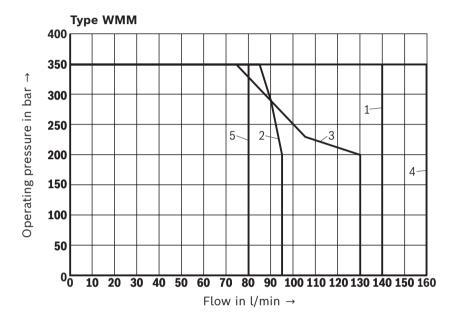

Motice:

The specified performance limits are valid for operation with two directions of flow (e.g. from P to A and simultaneous return flow from B to T).

Due to the flow forces acting within the valves, the achievable performance limit may be considerably lower

with only one direction of flow (e.g. from P to A while port B is blocked)!

In such cases of use, please consult us.

Dimensions: Type WMM (dimensions in mm)

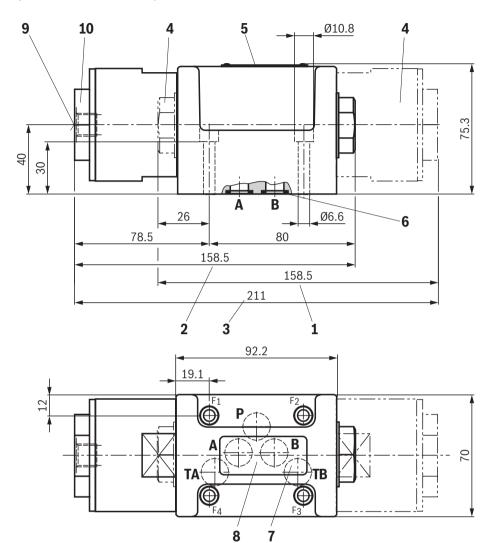

- 1 Valves with 2 switching positions, symbol B and .B
- 2 Valves with 2 switching positions, symbol A, C, D .A
- **3** Valves with 3 switching positions
- 4 Cover and hand lever
- 5 Name plate
- 6 Identical seal rings for port A, B, P, TA, TB
- 7 Additional port TB can optionally be used
- 8 Porting pattern according to ISO 4401-05-04-0-05

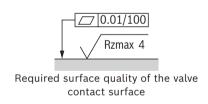

Notices:

- ▶ Deviating from ISO 4401, port T is called TA and port T1 is called TB in this data sheet.
- ► For valves with 2 switching positions and symbols B and Y, the hand lever is installed on valve side B.
- ► The dimensions are nominal dimensions which are subject to tolerances.

Valve mounting screws and subplates, see page 15.

Dimensions: Type WN (dimensions in mm)

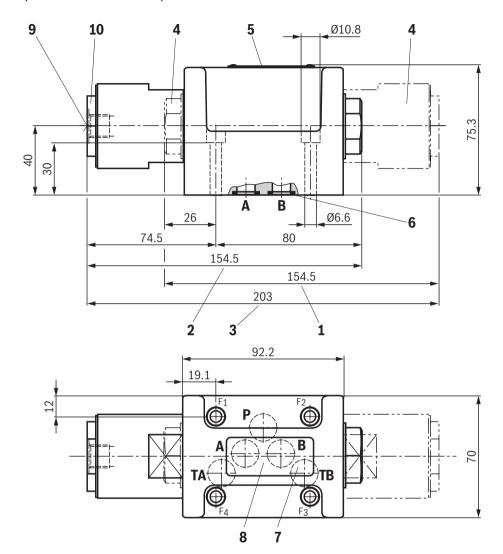

- 1 Valves with 2 switching positions, symbol B and .B
- 2 Valves with 2 switching positions, symbol A, C, D .A
- 3 Valves with 3 switching positions
- 4 Cover and plug screw
- 5 Name plate
- 6 Identical seal rings for port A, B, P, TA, TB
- 7 Additional port TB can optionally be used
- 8 Porting pattern according to ISO 4401-05-04-0-05
- 9 Pilot oil port G1/4 (version "-")
 Pilot oil port 7/16" 20 UNF (version "/12")
- 10 Socket

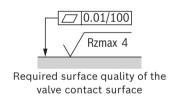

Notices:

- ▶ Deviating from ISO 4401, port T is called TA and port T1 is called TB in this data sheet.
- ► The dimensions are nominal dimensions which are subject to tolerances.
- ▶ When screwing in/releasing the connection tube on the pilot oil port (9), the bushing (10) must be secured against twisting by using an open-end wrench.

Valve mounting screws and subplates, see page 15.

Dimensions: Type WP (dimensions in mm)

- 1 Valves with 2 switching positions, symbol B and .B
- 2 Valves with 2 switching positions, symbol A, C, D, EA...
- 3 Valves with 3 switching positions
- **4** Cover and plug screw for valves with 2 switching positions, symbol B, Y, EB...
- 5 Name plate
- 6 Identical seal rings for port A, B, P, TA, TB
- 7 Additional port TB can optionally be used
- 8 Porting pattern according to ISO 4401-05-04-0-05
- 9 Metric pilot oil port: G1/4 UNC pilot oil port: 7/16" - 20 UNF
- 10 Socket

Motices:

- ▶ Deviating from ISO 4401, port T is called TA and port T1 is called TB in this data sheet.
- ► The dimensions are nominal dimensions which are subject to tolerances.
- ▶ When screwing in/releasing the connection tube on the pilot oil port (9), the bushing (10) must be secured against twisting by using an open-end wrench.

Valve mounting screws and subplates, see page 15.

Dimensions

Valve mounting screws (separate order)

Size	Quantity	Hexagon socket head cap screws	Material number		
10	4	ISO 4762 - M6 x 40 - 10.9-flZn-240h-L	R913000058		
		Friction coefficient μ_{total} = 0.09 0.14; tightening torque M_A = 12.5 Nm ±10%			
	or				
	4	ISO 4762 - M6 x 40 - 10.9	Not included in the Rexroth		
		Friction coefficient μ_{total} = 0.12 0.17; tightening torque M_A = 15.5 Nm ±10%	delivery range		
	or				
	4	1/4-20 UNC x 1-1/2" ASTM-A574	R978800710		
		Friction coefficient μ_{total} = 0.19 to 0.24; tightening torque M_A = 25 Nm ±15%			
		Friction coefficient μ_{total} = 0.12 to 0.17; tightening torque M_A = 19 Nm ±10%			

Notice:

In case of different friction coefficients, the tightening torques are to be adjusted accordingly.

Subplates (separate order) with porting pattern according to ISO 4401, see data sheet 45100.
