

Pressure relief valve, pilot operated

Type L-DB

RE 25788

Edition: 2015-04

- ▶ Size 40 ... 300
- ▶ Component series 3X
- ▶ Maximum operating pressure 25 bar
- ▶ Maximum flow 50,000 l/min

Features

- ▶ For flange connection
- ▶ As cartridge valve
- ▶ Flange connection according to DIN EN 1092-2 type 21
- ▶ 2 pressure ratings
- ▶ Adjustment type for pressure adjustment:
Bushing with hexagon and protective cap

Function, section

Pressure valves of type L-DB are pilot operated pressure relief valves for a low preload pressure. They are suitable for high flow rates.

The valves are basically comprised of a pipeline installation housing unit (1), main piston guide (2), to hold the pilot control valve (5) and main spool (3).

Type L-DB

The pressure built up in channel P acts on the main spool (3) and is available via the nozzles (4) and (6) at the pilot control valve (5) simultaneously. If the pressure in channel P exceeds the value set at pilot control valve (5), the valve opens and the pilot oil drains directly into channel Y (7). The main spool (3) moves upward against the springs (8) and (9) and connects channel P to channel T, for as long as the pressure is above the value set on the pilot control valve.

With version "U", the main spool (3) is held shut only by means of the outer spring (9). By relieving the control port, lower circulation pressure can be achieved.

Type L-DBF

The functionality of the "L-DBF" version is basically the same as the functionality of type L-DB. However, the valve is designed as a cartridge valve without pipe casing (1).

Technical data

(For applications outside these parameters, please consult us!)

	► Contains water	HFC (Fuchs Hydrotherm 46M, Petrofer Ultra Safe 620)	ISO 12922	90223

**Important information on hydraulic fluids:**

- For more information and data about the use of other hydraulic fluids, refer to data sheets above or contact us!
- There may be limitations regarding the technical valve data (temperature, pressure range, life cycle, maintenance intervals, etc.)!

- The flash point of the hydraulic fluid used must be 40 K higher than the maximum valve surface temperature.

► Flame-resistant – contains water:

- Life cycle as compared to operation with mineral oil HL, HLP 30 to 100%

¹⁾ The cleanliness classes specified for the components must be adhered to in hydraulic systems. Effective filtration prevents faults and at the same time increases the life cycle of the components. For the selection of the filters see www.boschrexroth.com/filter.

²⁾ Only version “L-DBF”

**Notice:**

The maximum operating pressure is added up from the set pressure and counter pressure!

Characteristic curves

(simulated with HLP46, $\vartheta_{oil} = 40 \pm 5 \text{ }^{\circ}\text{C}$)

Minimum set pressure depending on the flow

— Standard version
 - - - Model "U"

Notice:

The characteristic curves were simulated using **external, depressurized pilot oil return**.

¹⁾ DIN EN 1092-2 must be observed regarding the selection and layout.

²⁾ Tightening torques were calculated using hexagon socket head cap screws ISO 4762 (galvanized).
Friction coefficient $\mu_{\text{total}} = 0.09$ to 0.14

³⁾ Version “16”

⁴⁾ Version “25”

⁵⁾ 2 pieces each

Notice:

The tightening torques stated are guidelines when using screws with the specified friction coefficients and when using a manual torque wrench (tolerance $\pm 10\%$).
