

Plug-in amplifier

RE 30264/07.12
Replaces: 03.10

1/8

Type VT-SSPA1

Component series 2X

Features

- Analog amplifier for controlling proportional valves (pressure and directional valves) without position control
- Differential input
- Ramp time adjustable (60 ms...5 s)
- Sensitivity, valve zero point, dither frequency adjustable
- Operating voltage 24 V

Notice:

The photo is an example configuration.
The delivered product differs from the figure.

Test and service device

- Current measurement adapter VT-PA-5 (see data sheet 30073).

Function

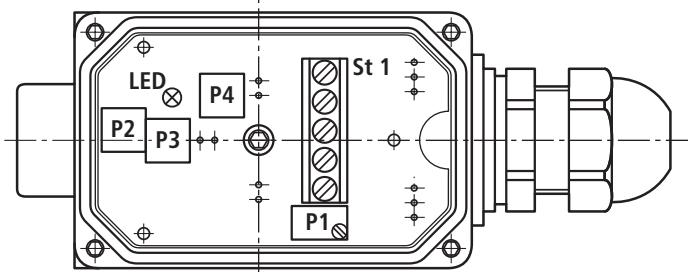

The active connector is used for **controlling** proportional valves without position control. It is directly attached to the solenoid plug of the valve. The **connection cable** on the control side (U_B , command value) is led through a gland fitting and connected. An **LED** signals the available supply voltage. Depending on the type of the active connector, the **command value is specified** as voltage 0...10 V or as current 4...20 mA.

The command value can be adjusted with regard to **zero point** and **sensitivity**. In case of voltage specification, a **differential input** is available.

Apart from that, the command value can be led via a **ramp**. In order to allow for adjustment to special applications, the **dither amplitude** was designed variably.

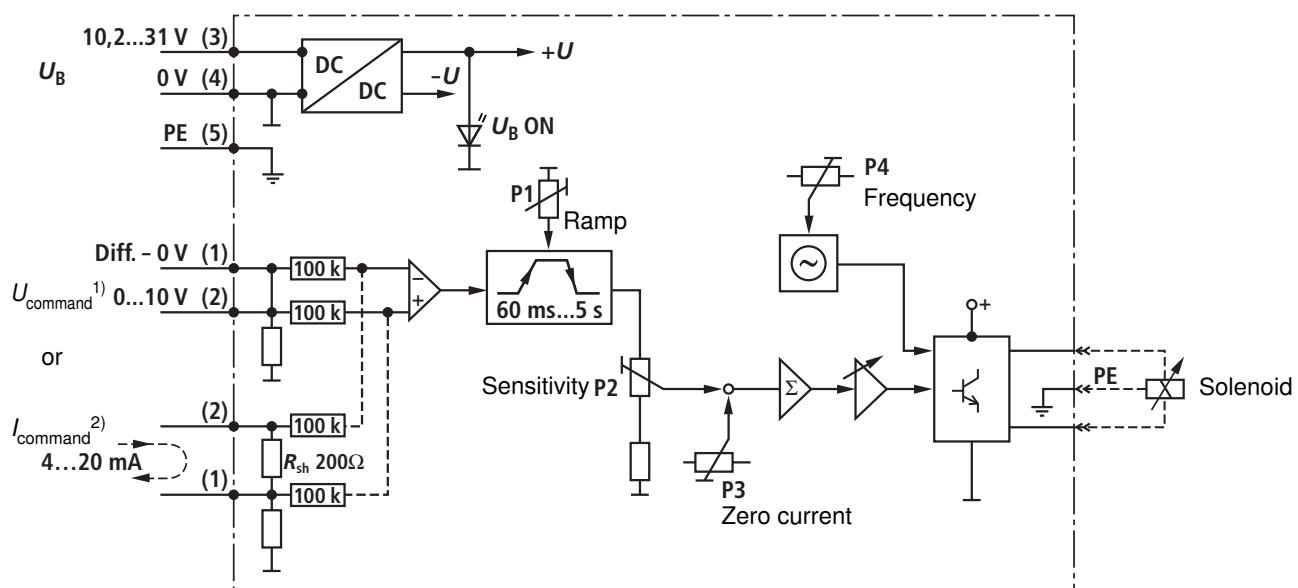

Upon delivery, the dither amplitude has already been set to a perfect value so that another adjustment is only necessary in the above-mentioned special cases.

Connections and adjustment

P1	- Ramp time
P2	- Sensitivity
P3	- Zero point
P4	- Dither frequency
St 1	- Connection terminal
LED	- Display U_B

Block diagram and pin assignment

²⁾ 0811405145; 0811405162

Technical data (For applications outside these parameters, please consult us!)

Supply voltage nom. 24 V =		
Solenoid 2.5 A	Battery voltage 10.2...31 V Rectified voltage 10.2...27 V	
Solenoid 0.8 A	Battery voltage 21...31 V Rectified voltage 21...27 V	
Residual ripple	< 2 V _{ss}	
Power consumption max.	VA	55 (see valve data)
Command value	0811405143 0811405144 0811405145 0811405162	0...10 V = 4...20 mA
Output	0811405145 0811405143 0811405144 0811405162	I _{max} = 2.5 A (rectangular voltage, pulse-modulated) I _{max} = 0.8 A (rectangular voltage, pulse-modulated)
Ramp time		60 ms...5 s
Dither frequency range	Hz	95...340
Zero point calibration range		See characteristic curves, page 5
Sensitivity adjustment range		
Special features		LED (green): Supply voltage is available, Clocked output stage, Fast energization for short actuating times, Adjustments via trimming potentiometer
Protection class		IP 65, in plugged condition
Electro-magnetic compatibility tested according to		EN 61000-6-2: 2002-08 EN 61000-6-3: 2002-08
Design:		Connector housing
Connections	– Solenoid – U _B , command value	DIN 43650 Cable 5x0.75 mm ² , shielded (incl. PE)
Ambient temperature	°C	-20...+70
Storage temperature range	°C	-20...+85
Weight	m	0.23 kg

Commissioning and adjustment

- Preparation of the connection cable.

- Lead the cable through the gland fitting and connect to terminal St 1.

Notice

Supply voltage and command value must not yet be applied to the cable!

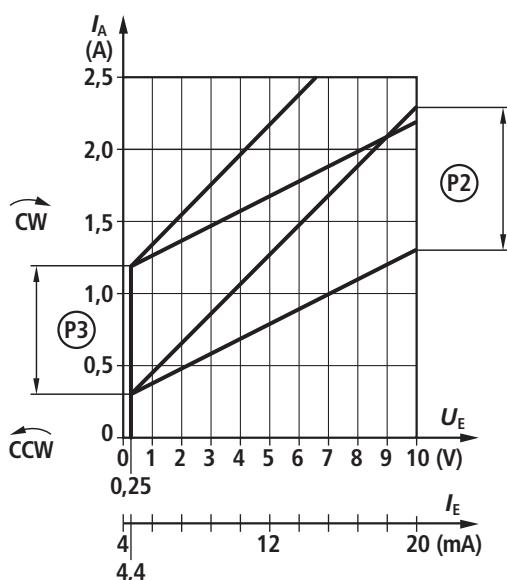

- Apply the supply voltage

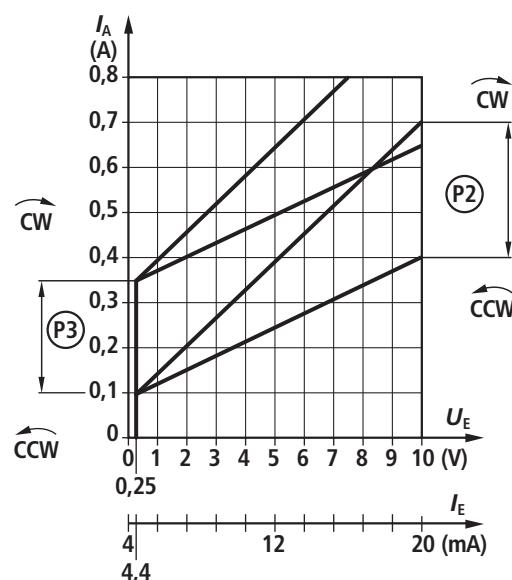

LED (green) is illuminated.

- Zero point adjustment → Poti P2, with minimum command value specification.
- Sensitivity adjustment → Poti P2, with maximum command value specification.

P2 Sensitivity range
P3 Zero current range

Commissioning and adjustment

6. Dither frequency adjustment

→ Poti .

The dither frequency has already been correctly adjusted upon delivery. For special applications, correction may be necessary. in this connection, please contact DC-IA/PRM12.

 Factory setting

 P4 Poti position

7. Ramp time adjustment (accelerations and braking)

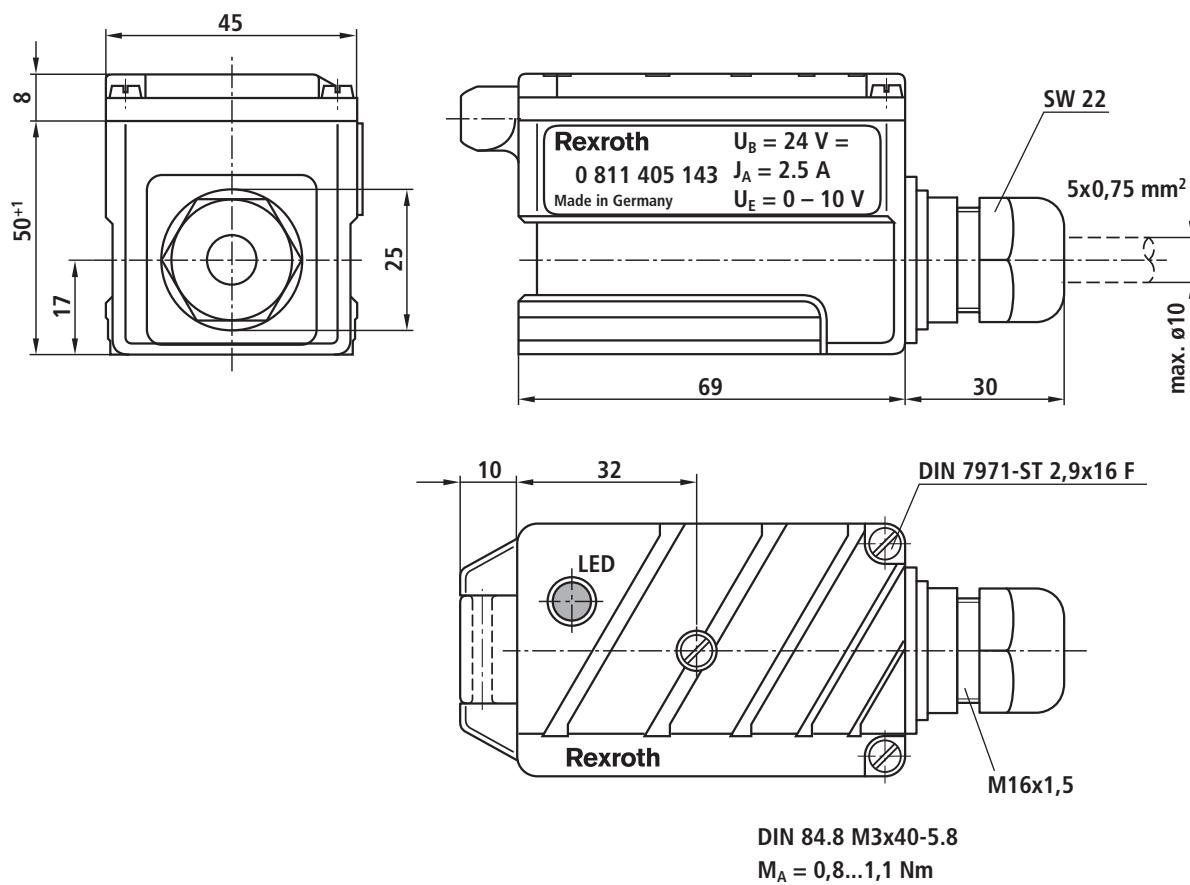

→ Poti .

 Factory setting

 P1 Poti rotation

Device dimensions (dimensions in mm)

Project planning / maintenance instructions / additional information

- The plug-in amplifier may only be unplugged and plugged when de-energized.
- The distance to aerial lines, radios and radar systems must be sufficient (> 1 m).
- Do not lay solenoid and signal lines near power cables.
- For signal lines and solenoid conductors, we recommend using shielded cables.
The cable shield must be connected to the control cabinet extensively and as short as possible.
