

Control module

RE 51156/05.13
Replaces: 09.11

1/96

Type IH15B

Component series 1X
Maximum operating pressure 350 bar
Maximum flow 30 l/min

H/A/D 7228

Features

- Compact design
- No piping of the control
- Few joints
- Variable set-up
- Can be combined individually
- Direct mounting on power unit tank cover; external set-up possible, as well
- Ready for connection

Description, general

The IH15B control modules serve the realization of complete hydraulic controls. They can be fitted and mounted individually. The directional valve modules and seat valve modules can be combined.

Using the tank connection modules, the control modules can be directly mounted to the tank cover of the oil tank. Using the modules for external attachment, the control modules can,

however, also be installed arbitrarily into every system. The reducing modules allow for attachment of the IH15B modules to IH15A and IH20B modules.

The modules have preferably been designed for hydraulic controls for low-flow actuators up to a flow of 30 l/min. They are connected by means of three tie rods.

Technical data (For applications outside these parameters, please consult us!)

hydraulic

Installation position	Any ¹⁾	
Hydraulic fluid	Mineral oil (HL, HLP) according to DIN 51524 part 2 ²⁾ ; fast biodegradable hydraulic fluids according to VDMA 24568 (see 90221); HETG (rape seed oil) ²⁾ ; HEPG (polyglycols); HEES (synthetic esters) ³⁾ ; other hydraulic fluids upon request	
Hydraulic fluid temperature range	°C	-30 to +80 (with NBR seals) -20 to +80 (with FKM seals) (observe the admissible viscosity range of the valves!)
Ambient temperature range	°C	-30 to +50
Viscosity range	mm ² /s	2.8 to 500 ¹⁾
Maximum admissible degree of contamination of the hydraulic fluid, cleanliness class according to ISO 4406 (c)		Class 20/18/15 ¹⁾
Valve pressure rating		Refer to the related data sheet
Maximum flow of the directional seat valves type: KSER1...	q _v	l/min 20 (2/2 directional seat valve) 12 (3/2 directional seat valve)

electric

Voltage type	Direct voltage	
Available voltage ⁴⁾	U	V 24
Voltage tolerance (nominal voltage)		% ±10
Power consumption	P	W 19 and/or 30 ¹⁾
Switching time according to ISO 6403	On	T ms 25 to ≤ 80
	Off	T ms 10 to 25
Switching frequency		cy/h up to 15,000
Protection class according to EN 60529 ⁵⁾ (VDE 0470-1) DIN 40050-9		IP 65
Coil temperature ⁶⁾	°C	150

¹⁾ Observe the valve details

²⁾ Suitable for NBR **and** FKM seals

³⁾ Suitable **only** for FKM seals

⁴⁾ Special voltage on request

⁵⁾ With mating connector mounted and locked

⁶⁾ Due to the temperatures occurring at the surfaces of the solenoid coils, the European standards EN563 and EN982 need to be adhered to!

Project planning information

When designing the control with accumulator you have to make sure that the accumulator is protected against inadmissible overpressure by means of a type examination-tested pressure relief valve. The type-examination tested pressure relief valve must not assume control tasks. The set pressure of the type-examination tested pressure relief valve must be less than or equal to the maximum admissible operating pressure of the accumulator.

In order to achieve the best utilization of the accumulator volume possible as well as long service life, compliance with the following nitrogen filling pressure value is recommended:

$$p_0 = 0.9 \times p_{(\text{minimum operating pressure})}$$

When attaching the IH15B control to a UPE5 drive module, the following has to be observed:

The total length of the IH15B control should not be longer than the UPE5 drive module.

Maximum recommended total length l = 500 mm.

Please consult us if the total length of the required control should be longer.

Overview of the modules

HAD 7229

Basic module "G"

Basic module "G"

- Basic module with integrated pressure relief valve for pressure setting
- Basic module with two valve stations and integrated pressure relief valve
- if the "G" basic modules are used, no further stacking is possible
- For more information see page 8

HAD 7223

Directional seat valve module "W", "S"

Directional seat valve module, "W", "S"

- Directional valve modules
 - Allow the design of controls using valves with porting pattern according to DIN 24340 form A
- Seat valve modules basically consist of:
 - A pressure relief module
 - One or several control modules
 - One end module
- The control is designed depending on the relevant application
- For more information see page 14

HAD 7219

Module for external attachment

Module for external attachment

- Allows for the attachment of the directional seat valve modules to any hydraulic system or any machine
- For more information see page 63

Overview of the modules

 HAD 7226	<p>Module for drive module UPE5</p> <ul style="list-style-type: none"> – Allows for the attachment of the modules to the UPE5 drive module (catalog 51145) – For more information see page 80

Dimension Z = 290 mm F60DBU

Installation information:

Wind the filter cartridge as tight as possible on the block. Then, wind the filter cartridge by further 1/3 of a rotation.

Project planning information

When designing the control with accumulator you have to make sure that the accumulator is protected against inadmissible overpressure by means of a type examination-tested pressure relief valve. The type-examination tested pressure relief valve must not accept any control tasks. The set pressure of the type-examination tested pressure relief valve must be less than or equal to the maximum admissible operating pressure of the accumulator.

In order to achieve the best utilization of the accumulator volume possible as well as long service life, compliance with the following nitrogen filling pressure value is recommended:

$$p_0 = 0.9 \times p_{(\text{minimum operating pressure})}$$

Mounting information

The accumulators is to be fastened so that in case of operational vibrations, safe hold is guaranteed. No holding forces may be applied via the oil and gas connection.

Module for external attachment: Attachment with application examples

- 1** Connection module type A or connection module with through bore type AD (see page 65 and 66)
- 5** Sandwich module type ZG and ZGPT (see page 70 and 71)
- The sandwich module with mounting thread can be combined with the connection module item 1 type AD and with the end module item 3 type E. It can, however, not be combined with the connection module type A and ADB.

The length dimensions are calculated by adding dimension "X" of the directional valve modules (see page 14 to 62).

Project planning information

When designing the control with accumulator you have to make sure that the accumulator is protected against inadvertible overpressure by means of a type examination-tested pressure relief valve. The type-examination tested pressure relief valve must not accept any control tasks. The set pressure of the type-examination tested pressure relief valve must be less than or equal to the maximum admissible operating pressure of the accumulator.

In order to achieve the best utilization of the accumulator volume possible as well as long service life, compliance with the following nitrogen filling pressure value is recommended:

$$P_o = 0.9 \times P_{\text{minimum operating pressure}}$$

Mounting information

The accumulators is to be fastened so that in case of operational vibrations, safe hold is guaranteed. No holding forces may be applied via the oil and gas connection.

Module for external attachment: Attachment with application examples

2 Connection module with pressure relief valve type ADB
(see page 67)

3 End module type E (see page 72)

4 Sandwich module type Z or ZPT (see page 68 and 69)
The sandwich module can also be combined with the connection module item 1 type A or item 2 type ADB and with the end module item 3.

The length dimensions are calculated by adding dimension "X" of the directional valve modules (see page 14 to 62)

Module for drive module UPE5, type "UPE5": Description, general

The control modules for the UPE5 drive module serve the realization of complete hydraulic controls. They can be fitted and mounted individually.

The filter **or** accumulator shut-off module establishes the connection of the hydraulic control to the K2 connection of the drive module (see 51145).

Using the connection modules, the IH15B control modules can be attached to the filter **or** accumulator shut-off module.

Module for drive module UPE5, type "UPE5": Attachment

Project planning information

The total length of the IH15B control should not be longer than the UPE5 drive module.

Maximum recommended total length l = 500 mm.

Please consult us if the total length of the required control should be longer.

Project planning information

When designing the control with accumulator you have to make sure that the accumulator is protected against inadmissible overpressure by means of a type examination-tested pressure relief valve. The type-examination tested pressure relief valve must not accept any control tasks. The set pressure of the type-examination tested pressure relief valve must be less than or equal to the maximum admissible operating pressure of the accumulator.

In order to achieve the best utilization of the accumulator volume possible as well as long service life, compliance with the following nitrogen filling pressure value is recommended:

$$p_0 = 0.9 \times p_{\text{minimum operating pressure}}$$

Mounting information

The accumulators is to be fastened so that in case of operational vibrations, safe hold is guaranteed. No holding forces may be applied via the oil and gas connection.

Accumulator shut-off module, type "UPE5SSB"

Symbol

Assembly tool for filter cartridge

- Strap wrench Material no.: R904001048

Installation information for F30, F60, UPE5F30 and UPE5F60:

- Wind the filter cartridge as tight as possible on the block.
Then, wind the filter cartridge further by further 1/3 of a rotation.

Installation information for DF30, DF40, DF50, DFS30, DFS40 and DFS50:

- Wind the filter cartridge as tight as possible on the block.
Then, wind it back by 1/8 to 1/4 of a rotation.
